DEPARTMENT OF AUDIOLOGY AND SPEECH LANGUAGE PATHOLOGY

BACHELOR IN AUDIOLOGY AND SPEECH LANGUAGE PATHOLOGY (B. ASLP)

Vision of the university

To be recognized by the Government and society at large as an institution able to deliver excellence with relevance in the field of higher education and research focusing on the needs of the nation in tune with the technological revolution to cope with the knowledge explosion and global competence.

Mission of the University

To develop the institution as a Centre of Excellence, keeping pace with the advances in the field, so as to provide quality higher education to the students and instill in them high standards of discipline and ethics so that they become enlightened individuals in the service of humanity and to carry out focused research in the frontier areas of science and technology.

FACULTY: Faculty of Allied Health Sciences

DEPARTMENT: Department of Audiology and Speech Language Pathology

Vision of the Department

The Department of Audiology and Speech-language Pathology is focused on evolving the scientific understanding of human communication and its disorders and to improve the quality of life of people across the lifespan.

Mission of the Department

- To equip the students with foundational academic, and clinical knowledge and skills that are acquired through innovative classrooms, simulated learning experiences, mentored research, and guided clinical experiences.
- To provide public education and awareness in the field.
- To promote ethical practices.

Description of the programme

Bachelor in Audiology and Speech-Language Pathology is an undergraduate program offered with an aim to equip the students with knowledge and skills to

- Function as audiologists and speech-language pathologists in different work settings
- Understand concepts in speech, language, communication, and hearing
- Screen, evaluate, and diagnose different disorders related to speech, language, swallowing and hearing and its severity
- Management of speech, language, swallowing, and hearing disorders across life span
- Counsel persons with disorders of communication and their family members
- Liaise with professionals in allied fields and another stake holder
- Implement public awareness and education program
- Undertake advocacy measures on behalf of and for persons with speech, language and hearing disorders.

Programme Educational Objectives - PEO	
PEO-01	Students will be able to use their fundamental knowledge and clinical competence in assessment, management and rehabilitation to function as an Audiologist and Speech Language Pathologist to achieve professional excellence.
PEO-02	Students will be able to screen, evaluate, diagnose and manage different disorders of speech, language, swallowing, hearing and balancing disorders. Students will be proficient to assess the type and severity of speech, language, swallowing, hearing and balancing disorders.
PEO-03	Students will be able to practice and advocate the profession with highly professional and ethical attitudes, strong communication skills, and effective professional skills to work in an inter-disciplinary team.
PEO-04	Students will be able to imbibe the culture of research, innovation and entrepreneurship
PEO-05	Students will be able to participate in lifelong learning process for implementing Evidence Based Practices in speech, language, swallowing, hearing and balancing disorders.

Graduate Attributes	
GA-1	Professional Knowledge: Demonstrate scientific knowledge and understanding to work as a health care professional in Audiology and Speech Language Pathology
GA-2	Clinical/Practical Skills: Demonstrate clinical/ practical skills in order to implement the preventive, assessment and management plans for quality health care services in Audiology and Speech Language Pathology
GA-3	Communication: Ability to communicate effectively and appropriately in writing and orally to patients/clients, care-givers, other health professionals and other members of the community
GA-4	Cooperation/ Team work: Ability to work effectively and respectfully with interdisciplinary team members to achieve coordinated, high-quality services for individuals with speech, language, swallowing, hearing and balancing disorders.
GA-5	Professional Ethics: Ability to identify ethical issues and apply the ethical values in the professional life
GA-6	Research/ Innovation Skills: Foster research capabilities, enabling the design and execution of scientific investigations, data analysis using modern techniques and statistical tools, interpretation of experimental results, and formulation of evidence-based conclusions.
GA-7	Critical Thinking and Problem Solving: Ability to think critically and apply learning to real-life situations
GA-8	Reflective Thinking: Ability to employ reflective thinking along with the ability to create the sense of awareness one self and society
GA-9	Information/Digital Literacy: Ability to use ICT in a variety of learning situations.
GA-10	Multi-cultural competence: Ability to effectively engage in a multicultural society and interact respectfully
GA-11	Leadership qualities: Ability to respond in an autonomous and confident manner to planned and uncertain situations, and being able to manage themselves and others effectively
GA-12	Lifelong learning and adaptability: Cultivate a mindset of continuous learning, staying informed about scientific advancements and adapting to new tools, methods, and technologies to remain competitive in a rapidly evolving scientific landscape.

Programme Outcome – POs

Programme Outcome– PO	
PO-A	To understand the basic concepts in speech, language, hearing, and communication and also other related allied disciplines
PO-B	To understand the normal development of speech, language, hearing, and communication in terms of its anatomical, physiological, physical, social, psychological, and linguistic basis
PO-C	To understand the basic concepts of various speech, language, hearing, and communication disorders
PO-D	To acquire in-depth knowledge in the diagnosis, management, and counselling of various speech, language, hearing, and communication disorders
PO-E	To acquire knowledge in the prevention, early identification, and early intervention of various speech, language, hearing, and communication disorders
PO-F	To get acquainted with socio-cultural, legislative, and ethical practices in the field of speech and hearing
PO-G	To promote education on public awareness and the importance of mainstreaming
PO-H	To promote advocacy for population who are differently abled

Duration of the program: The duration of the program is 4 years including one academic year of internship. The course should be completed within six years from the date of admission.

An academic year consists of two semesters, and each semester shall extend over a minimum period of sixteen weeks excluding examination days. The number of working days in a semester shall not exceed more than 100 working days.

The semesters shall be spread out as follows:

Odd semester I: July- December

Odd semesters 3, 5, 7: June- October/November

Even semesters 2, 4, 6, 8 December-April

Total credit: 160

CURRICULUM & SYLLABI

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3601	COMMUNICATION SCIENCES	3	1	0	4

Objectives:

After completing this course, the student will be able to understand

- The basic concepts in speech, hearing, language and communication
- The basic concepts of hearing sensitivity and acoustics

Course Outcome – COs		Cognitive Skill
CO-01	To understand the basic concepts in speech, language, and communication	R, U, A
CO-02	To understand bases of speech and language.	R, U, A
CO-03	To understand the basic concepts of sound intensity and decibel	R, U, A
CO-04	To understand the basic concepts of hearing sensitivity and audibility	R, U, A
CO-05	To understand normal development of speech, language and hearing	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-04	S	L	M	S	M	N	L	N
CO-05	S	S	M	L	M	M	L	N

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: SPEECH, LANGUAGE AND COMMUNICATION

12

- Definitions of speech, language, communication, and their components
- Distinctions, similarities and functions of communication, speech and language
- Speech as an overlaid function
- Speech chain
- Normal development of speech & language
- Pre-requisites and factors affecting speech-language development
- Cultural and linguistic issues in communication, bi/multilingual issues

UNIT II: BASES OF SPEECH AND LANGUAGE

12

- Overview of speech production – speech sub-systems
- Speech mechanism as a sound generator - vocal tract, periodic and aperiodic sounds
- Acoustic theory of speech production
- Social, cognitive, neurological, and genetic bases of speech and language

UNIT III: SOUND INTENSITY AND CONCEPT OF DECIBEL

12

- Acoustic energy and power, absolute and relative units – importance of reference
- Sound intensity and intensity levels –absolute and relative measurements
- Bel and decibels, sound pressure and decibel sound pressure levels, relationship between intensity and pressure
- Characteristics and application of decibels

UNIT IV: AUDIBILITY & HEARING

12

- Hearing range –intensity and frequency
- Up-down and staircase procedure of estimating minimum audible levels
- Minimum audible pressure and field
- Missing six dB and related issues
- Reference equivalent threshold sound pressure levels and hearing levels
- Sensation levels, Threshold of pain, Most comfortable levels

UNIT V: INTRODUCTION TO AUDIOLOGY AND SPEECH-LANGUAGE

PATHOLOGY

12

- Speech and Language Pathology- Historical aspects of the field of speech-language pathology
- Development of speech and language pathology: Indian and global context
- Scope of practice in speech-language pathology
- Interdisciplinary nature of speech-language pathology.
- Audiology – historical aspects, development of instrumentation in audiology
- Development of audiology: Indian and global context
- Branches of audiology
- Scope of audiology

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3602	ANATOMY AND PHYSIOLOGY OF SPEECH AND HEARING	3	1	0	4

Objectives:

After completing this course, the student will be able to understand the

- Anatomy of the auditory system
- Anatomy of the speech mechanism
- Physiology of hearing mechanism
- Functioning of speech and swallowing mechanism.

Course Outcome – COs		Cognitive Skill
CO-01	To understand the basic concepts of anatomy	R, U, A
CO-02	To understand the embryological development of the speech and hearing system	R, U, A
CO-03	To understand the anatomy and physiology of speech and swallowing mechanism	R, U, A
CO-04	To understand the anatomy and physiology of external and middle ear	R, U, A
CO-05	To understand the anatomy and physiology of inner ear	R, U, A

R- Remember, U-Understand, A-Apply, An- Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

PO CO	PO-A	PO-B	PO-C	PO-D	PO-E	PO-F	PO-G	PO-H

CO-04	S	S	L	M	L	N	L	N
CO-05	S	S	L	M	L	N	L	N

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: INTRODUCTION

12

- General anatomical terms
- Anatomical positions and planes of reference
- Cells, tissues and muscles
- Muscle connection and joints
- Tissue - vascular and neural

UNIT II: EMBRYOLOGY

12

- Basic terminologies related to embryology
- Development of external ear
- Development of middle ear
- Development of Inner ear and the auditory system
- Five examples of embryonic anomalies affecting speech-language & hearing
- Development of respiratory structures
- Development of larynx
- Development of facial region and palate
- Development of tongue and teeth

UNIT III: ANATOMY AND PHYSIOLOGY OF SPEECH PRODUCTION SYSTEMS AND SWALLOWING

12

- Mechanisms of breathing with emphasis on speech breathing
- Supportive frame work of larynx
- Anatomy of larynx
- Anatomy of oesophagus
- Brief mechanisms of swallowing
- Mechanisms of phonation
- Anatomy of articulators and associated structures
- Contribution of articulatory structures to speech production
- Anatomy of resonatory mechanisms
- Contribution of resonatory mechanisms to speech production

UNIT IV: ANATOMY AND PHYSIOLOGY OF EXTERNAL AND MIDDLE EAR 12

- Anatomy of the external ear
- Physiology of external ear including localization
- Head shadow effect, inter-aural intensity and time differences
- Brief anatomy of temporal bone
- Anatomy of tympanic membrane and associate structures
- Anatomy of middle ear and ossicles
- Anatomy of Eustachian tube and middle ear muscles
- Physiology of Eustachian tube
- Middle ear transformer action
- Physiology of middle ear muscles

UNIT V: ANATOMY AND PHYSIOLOGY OF LABYRINTH 12

- Anatomy of bony and membranous labyrinth
- Macro anatomy of cochlea
- Micro anatomy of cochlea
- Innervations and blood supply to cochlea
- Overview of theories of hearing
- Physiology of cochlea
- Electrical potentials of the cochlea
- Physiology of hearing through bone conduction
- Overview to physiology of balancing mechanisms
- Overview to anatomy of central auditory pathway
- Overview to central auditory mechanism

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3603	CLINICAL PSYCHOLOGY	3	1	0	4

Objectives:

After completing the course, the student will be able to understand the

- Scope of clinical psychology and its significance for speech and hearing
- Concept of normality, abnormality, and classification of abnormal behaviour
- Cognitive, motor, emotional, and social development,
- Theories of learning and therapy techniques based on learning principles
- Neuropsychological assessment and rehabilitation
- Application of neuropsychology in the field of speech and hearing
- Basics of counselling

Course Outcome – COs		Cognitive Skill
CO-01	To understand the basic concepts of psychology	U, R
CO-02	To understand assessment procedures in clinical psychology	R, U, A
CO-03	To understand the basics of Developmental psychology	R, U, A
CO-04	To understand the principles of learning and behavior modification	R, U, A
CO-05	To understand Neuropsychology and its relevance to the study of speech	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

UNIT I: INTRODUCTION TO PSYCHOLOGY

12

- Introduction to psychology: definition, history and schools of psychology
- Scope of psychology
- Meaning and definition of clinical psychology
- Historical development, modern clinical psychology
- Significance of clinical psychology in health sciences
- Role of clinical psychology in speech and hearing
- Concept of normality
- Concept of abnormality
- Models of mental disorders: biological, psychological, social models

UNIT II: ASSESSMENT PROCEDURES IN CLINICAL PSYCHOLOGY

12

- Methods in clinical psychology: case history, clinical interviewing, clinical observation, definition and types of psychological testing
- Assessment of cognitive functions, Adaptive functions
- Assessment of personality
- Behavioural assessment
- Classification of abnormal behaviour
- History, need & rationale of classification
- Current classification system: DSM, ICD

UNIT III: DEVELOPMENTAL PSYCHOLOGY

12

- Child and developmental psychology: meaning, definition and scope
- Meaning of growth, development & maturation
- Principles of child development
- Motor development: general principals of motor development
- Stages in motor development: early motor development, motor development during later childhood and adolescence, decline with age
- Cognitive development: growth from early childhood to adolescence
- Piaget's theory of cognitive development
- Emotional development
- Social development

UNIT IV: PRINCIPLES OF LEARNING AND BEHAVIOUR MODIFICATION

12

- Learning: meaning, definition and characteristics
- Theories of learning: introduction
- Pavlov's classical conditioning: experiments and principles
- Skinner's operant conditioning: experiments and principles
- Therapeutic techniques based on learning principles
- Skill behaviour techniques
- Problem behaviour technique

UNIT V: NEUROPSYCHOLOGY AND ITS RELEVANCE TO STUDY OF SPEECH

12

- Neuropsychology: introduction and definition
- Neuropsychological assessment
- Neuropsychological rehabilitation
- Application of neuropsychology in the field of speech and hearing
- Counselling: introduction and definition
- Types of counselling: directive and non- directive
- Characteristics of a good counsellor

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3604	LINGUISTICS AND PHONETICS	3	1	0	4

Objectives:

After completing the course, the student will be able to understand

- Different branches and aspects of linguistics
- Characteristics and functions of language.
- Different branches of phonetics, applied linguistics and phonology.
- Morphology, syntax, semantics and pragmatics
- Acquisition of language and factors affecting it
- Bi/multilingualism and related issues

Course Outcome – COs		Cognitive Skill
CO-01	To understand basic linguistic concepts	R, U, A
CO-02	To understand the concept of phonetics and phonology.	R, U, A
CO-03	To understand concepts of morphology, syntax, semantics and applied linguistics	R, U, A
CO-04	To understand the concept of language acquisition and apply that knowledge in clinical field.	R, U, A
CO-05	To understand second language acquisition and Bi/Multilingualism.	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

PO CO	PO-A	PO-B	PO-C	PO-D	PO-E	PO-F	PO-G	PO-H
CO-01	S	M	M	M	N	N	M	L
CO-02	S	S	S	S	M	N	N	N
CO-03	S	N	S	S	M	N	S	L
CO-04	S	S	S	S	M	N	S	L
CO-05	S	N	N	N	M	N	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: LINGUISTICS

12

- Introduction to linguistics and different branches of linguistics: applied linguistics, sociolinguistics, psycholinguistics, metalinguistics, neurolinguistics and clinical linguistics
- Language characteristics and functions, difference between animal communication systems and human language
- Morphology – concepts of morph, allomorph, morpheme, bound, free and compound forms, roots etc.,
- Processes of word formation, content and function words
- Endocentric and exocentric constructions, form classes, grammatical categories
- Inflection and derivation, paradigmatic and syntagmatic relationship
- Principles and practices of morphemic analysis
- Langue versus parole
- Competence vs. performance

UNIT II: PHONETICS AND PHONOLOGY

12

- Introduction to phonetics
- Articulatory, acoustic, auditory and experimental phonetics – an introduction
- Articulatory classification of sounds – segmental and supra-segmental
- Classification description and recognition of vowels and consonants

- Pathological aspects of speech sound production
- Transcription systems with special emphasis on IPA.
- Transcription of samples of normal and disordered speech
- Introduction to phonology, classification of speech sounds on the basis of distinctive features and phonotactics
- Application of distinctive feature theory to speech pathology and speech therapy, phonotactics, phonotactic patterns of English and Indian languages
- Phonemic analysis – Principles and practices; their practical implications for speech pathologists
- Common phonological processes - assimilation, dissimilation, metathesis, haplology, epenthesis, spoonerism, vowel harmony, nasalization, neutralization

UNIT III: MORPHOLOGY, SYNTAX, SEMANTICS AND APPLIED LINGUISTICS

12

- Morphology – concepts of morph, allomorph, morpheme, roots, compound forms - endocentric and exocentric constructions, free and bound morphemes, inflection and derivation, principles and practices of morphemic analysis
- Syntax – Concepts of phrases and clauses, different methods of syntactic analysis, IC analysis, phrase structure, grammar, transformational generative grammar
- Introduction to the major types of transformations, Sentence types, notions about competence versus performance, Deep structure versus surface structure, Acceptability versus grammaticality, langue versus parole etc.
- A brief introduction to semantics – Semantic relations, semantic feature theory, Processes of word formation, content and function words, form classes, grammatical categories
- Usefulness of morphemic and syntactic analysis in planning speech and language therapy
- A brief, introduction to pragmatics and discourse.

UNIT IV: LANGUAGE ACQUISITION

12

- Issues in first language acquisition
- Pre-linguistic stages, linguistic stages
- Acquisition of phonology, morphology, syntax, semantics, and pragmatics

- Language and cognition
- A brief introduction to theories and models of language acquisition- Biological maturation theory, linguistic theory, behavioural theory, information processing theory, social interaction theory
- An integrated approach to theories communicative competence and its development
- Applied linguistics with special reference to communication disorders
- Usefulness of morphemic and syntactic analysis in planning speech and language therapy

UNIT V: BI/MULTILINGUALISM

12

- Introduction to the language families of the world and India
- Issues related to second language acquisition & factors influencing it
- Inter-language theory, language transfer and linguistic interference
- Differences between first and second language acquisition/learning
- Bilingualism/Multilingualism
- Meta phonology
- Writing systems – types of writing, History of writing systems, Indian writing systems

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3605	ELECTRONICS AND ACOUSTICS	3	1	0	4

Objectives:

After completing this course, the student will be able to understand

- The concept and types of power supply for biomedical instruments
- The basic aspects of digital signal processing
- The theoretical basis of acoustics required for audiologists
- The functioning of computers and computing systems

Course Outcome – COs		Cognitive Skill
CO-01	To understand the basic of concepts of electronic components and power supply for biomedical instruments	R, U
CO-02	To understand the theoretical basis of acoustics related to audiology	R, U, A
CO-03	To understand the basic concepts of acoustic treatment of rooms for audiology, to understand the basics of computers.	R, U, A
CO-04	To understand the concept of digital signal processing	R, U, A
CO-05	To understand different instrumentation in speech and hearing	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-05	S	N	N	L	N	N	N	N

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: ELECTRONIC COMPONENTS AND POWER SUPPLY

12

- Resistors, capacitors, inductors
- Transformers and potentiometers
- Semiconductor diodes and transistors
- Light emitting devices, seven segment displays, Liquid crystal displays
- Principles of operations and working of Field Effect Transistors, Uni-junction transistors and thyristors
- Introduction to linear and digital integrated circuits
- Block diagram of a DC power supply,
- Linear regulated power supplies, line regulation and load regulation, specifications of a DC power supply unit, Switched Mode Power Supply
- AC power supply, stabilizers, Uninterrupted Power Supply, and inverters
- Basic electronic concepts such as Polarity, Grounding

UNIT II: INTRODUCTION TO ACOUSTICS

12

- Vibration and their characteristics
- Sound - generation and propagation, characteristics of sound
- Amplitude, frequency and phase of pure tones
- Amplitude, frequency and phase of complex tones (FFT and spectrum), relationship between time and waveform, FFT and impulse response)
- Reflection, absorption and reverberation

- Acoustic immittance
- Electro-mechano-acoustic transformers

UNIT III: ACOUSTICAL TREATMENT, TRANSDUCERS AND BASICS OF COMPUTERS **12**

- Introduction to audiometric rooms, Absorption coefficient, Sabine's formula, Materials for construction of audiometric rooms, Lighting, grounding and other miscellaneous issues related to audiometric rooms, Evaluation of efficiency of sound proofing in the audiometric rooms
- Amplifiers, Microphones, loudspeakers - types and function
- Fundamentals of digital electronics, binary number system, Hex code, bit, byte, logic gates, counters, flip-flops etc.
- Introduction to computers, Operating systems, hard ware, software, memory devices and other peripherals, care and preventive maintenance of computers

UNIT IV: DIGITAL SIGNAL PROCESSING **12**

- Digital signal processing –introduction and need, Analog to digital converters, sampling and quantization
- Fundamentals of digital filtering, Infinite impulse response and finite impulse response filters
- Time domain methods of speech processing
- Frequency domain methods of speech processing
- Linear predictive analysis of speech signals, Digital coding of speech signals, Automatic speech recognition, Speech synthesis

UNIT V: INSTRUMENTATION IN SPEECH AND HEARING **12**

- Introduction to electronic instrumentation in speech and hearing
- Electrodes, filters and preamplifiers
- Principle of operations, block diagram, calibration, maintenance and troubleshooting of audiometers, immittance meters, oto-acoustic emissions, hearing aids, evoked potential system, speech and voice analyses systems, artificial larynx, electroglottograph

Total: 60 Hours

UNIT I: INTRODUCTION TO RESEARCH METHODS

12

- Meaning and purpose of research
- Need for research in audiology and speech-language pathology
- Funds/grants for research
- Steps in research: identification, selection
- Formulation of research questions: aims, objectives, statement of problem, hypothesis
- Types of variables; types of sampling procedures (random and non-random)
- Types/ methods of data collection and their advantages and disadvantages
- Reliability and validity (internal and external validity)

UNIT II: RESEARCH DESIGN IN AUDIOLOGY AND SPEECH-LANGUAGE

PATHOLOGY

12

- Types of research: survey, ex-post facto research, normative research, standard-group comparison
- Experimental and quasi experimental research: group design & single subject design
- Internal and external validity of research
- Between groups vs. repeated measures design
- Documentation of research: scientific report writing, different formats or styles (APA, AMA and MLA)
- Ethics of research

UNIT III: INTRODUCTION TO STATISTICS AND DATA COLLECTION **12**

- Application of statistics in the field of Audiology and speech-language pathology
- Scales of measurement: nominal, ordinal, interval, ratio
- Classification of data: class intervals, continuous and discrete measurement
- Normal distribution: general properties of normal distribution, theory of probability, area under normal probability curve
- Variants from the normal distribution: skewness and kurtosis
- Measure of central tendency: mean, median, mode
- Measures of variability: range, deviation (average and standard deviation), variance.

UNIT IV: STATISTICS AND RESEARCH DESIGNS **12**

- Choosing statistics for different research designs
- Correlational techniques: Pearson's Product Moment Correlation Coefficient; Spearman's Rank order correlation coefficient
- Statistical inference: concept of standard error and its use; the significance of statistical measures; testing the significance of difference between two means z-test, t-test; analysis of variance, post hoc tests
- Non-parametric tests: Chi-square test, Wilcoxon test, Mann-Whitney U test
- Reliability and validity of test scores: reliability and validity,
- Item analysis of qualitative data
- Software for statistical analysis

UNIT V: EPIDEMIOLOGY **12**

- Basic epidemiologic concepts and principles
- Epidemiologic data sources and measurements
- Epidemiologic methods – questionnaire survey, screening, personal survey, testing
- Media - their advantages and disadvantages
- Incidence and prevalence of hearing, speech, language disorders as per different census (NSSO, WHO).

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3607	NEUROLOGY	3	1	0	4

Objectives:

After completing this course, the student will be able to understand

- The basic concepts of anatomy and physiology of the nervous system related to speech and hearing
- The neural organization –different structures and functions of various systems
- The neurosensory and neuromotor controls in speech, language and hearing mechanisms
- The cerebral plasticity and dominance and its relevance for speech, language and hearing disorders
- Various neural diseases, lesions, nutritional and metabolic conditions affecting speech, language and hearing
- Basic principles and assessment procedures used in speech, language and hearing disorders associated with neurological conditions
- Basic principles and management procedures used in speech, language and hearing disorders associated with neurological conditions.

Course Outcome – COs		Cognitive Skill
CO-01	To understand anatomy and physiology of the nervous system	R, U, A
CO-02	To understand neural organization of speech and hearing processes	R, U, A
CO-03	To understand about neural disorders associated with speech disorders	R, U, A
CO-04	To understand about neural disorders associated with language and hearing disorders	R, U, A
CO-05	To understand about speech-language and swallowing disorders	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

CO-05	S	L	S	S	M	N	L	N

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: ANATOMY AND PHYSIOLOGY OF THE NERVOUS SYSTEM

12

- General introduction to basic neurological concepts
- Organization of the neural system
- Central, peripheral and autonomic neural system
- Neural structures - applied anatomy and physiology
- Cranial nerves and those important for speech, language, hearing and balance
- Cerebral blood supply, nourishment and protection of the brain
- General principles of neural organization
- Transmission of information in neural system – nerve fibers, synaptic transmission, action potential, chemical transmission, excitatory and inhibitory potential & neuromuscular transmission
- Cerebral plasticity and development of neural plasticity and cerebral dominance

UNIT II: NEURAL ORGANIZATION OF SPEECH AND HEARING PROCESSES 12

- Neurosensory organization of speech and hearing
- Central auditory nervous system
- Anatomy of oral sensation and oral sensory receptors
- Neuromotor control of speech
- The pyramidal, extra-pyramidal system, basal ganglia and cerebellar system
- Lower and upper motor neuron

- Alpha and gamma motor neurons
- Sensory and motor examination, oral, peripheral and other reflexes
- Swallowing mechanism and neural control
- Screening and bedside neurological examination

UNIT III: NEURAL DISORDERS ASSOCIATED WITH SPEECH AND HEARING

DISORDERS – I

12

- Neural infections – meningitis, encephalitis
- Developmental anomalies – spinal cord defects, syringomelia and bulbia, Arnold Chiari malformations
- Hydrocephalus – source and circulation of CSF, types and etiopathogenesis
- UMN lesions –spastic dysarthria
- LMN lesions –flaccid dysarthria
- Mixed lesion
- Extra pyramidal lesions – dyskinetic dysarthria
- Cerebellum and cerebellar pathway lesions – ataxic dysarthria
- Other diverse lesions and dysarthria

UNIT IV: NEURAL DISORDERS ASSOCIATED WITH SPEECH AND HEARING

DISORDERS – II

12

- Cerebrovascular diseases – ischemic brain damage – hypoxic ischemic encephalopathy, cerebral infarction – intracranial hemorrhage – intracranial, subarachnoid
- Trauma to the CNS – subdural hematoma, epidural hematoma, parenchymal brain damages
- Demyelinating diseases – multiple sclerosis, perivenous encephalomyelitis, Dementia
- Degenerative- Parkinsonism, Alzheimer's disease
- Metabolic, hereditary, acquired neuronal storage disorders
- Wilson's disease, Phenylketonuria
- Nutritional – Wernicke's encephalopathy, pellagra
- Alcoholic cerebellar degeneration
- Clinical-pathological methods and Neuro-imaging
- Tumors of the CNS – gliomas, embryonal tumors of meninges, metastasis, malignant tumors.

- Central language mechanism and its disorders
- Developmental motor speech disorders – cerebral palsy, muscular dystrophy
- Neurologic disorders with primitive reflexes, diagnosis and management
- Clinical neurological syndromes associated with speech and language disorders
- Childhood language disorders associated with neurologic disorders
- Swallowing associated with neurogenic disorders and assessing mastication and deglutition
- Agnosia and other conditions associated with speech and hearing disorders
- Cognitive disorders associated with neurologic disorders
- General management principles and options for childhood neurogenic speech, language and hearing disorders
- General management principles and options for adult neurogenic speech, language and hearing disorders.

Total: 60 Hours

12

- Clinical anatomy of the ear
- Congenital anomalies,
- Diseases of the external ear
- Tumors of the external ear
- Perforation and ruptures of tympanic membrane
- Eustachian tube dysfunction
- Otitis media with effusion, chronic suppurative otitis media
- Cholesteatoma
- Otosclerosis
- Trauma to temporal bone
- Facial nerve and its disorder

UNIT II: INNER EAR AND ITS DISORDERS

12

- Congenital anomalies
- Meniere's Disorder
- Ototoxicity
- Presbycusis
- Disorders of vestibular system
- Vestibular Schwannoma

- Tinnitus and medical line of treatment
- Pre-surgical medical and radiological evaluations for implantable hearing devices
- Overview of surgical technique for restoration and preservation of hearing
- Post-surgical care and complication of surgery for cochlear implants
- Overview of surgical technique, post-surgical care and complication of surgeries for implantable bone conducted hearing aids and middle ear implant

UNIT III: ORAL CAVITY AND ITS DISORDERS

12

- Anatomy of the oral cavity
- Common disorders of the oral cavity
- Tumors of the oral cavity
- Cleft lip and palate – medical aspects
- Clinical anatomy and physiology of pharynx
- Inflammatory conditions of the pharynx, tonsils and adenoids
- Tumors of the pharynx

UNIT IV: LARYNX AND ITS DISORDERS

12

- Clinical anatomy of larynx
- Difference between adult and infant larynx
- Clinical examination of larynx
- Stroboscopy - technique, procedure, interpretation and precautions
- Congenital laryngeal pathologies
- Inflammatory conditions of the larynx.
- Vocal nodule and other disorders of the vocal folds
- Benign and malignant tumours of the larynx
- Laryngectomy – overview of surgical procedure
- Phono surgery and other voice restoration surgeries

UNIT V: ESOPHAGUS AND ITS DISORDERS

12

- Clinical anatomy and physiology of esophagus
- Clinical examination of esophagus.
- Congenital anomalies of esophagus
- Esophageal fistula
- Inflammatory conditions of esophagus

- Benign conditions of esophagus,
- Malignant conditions of the esophagus.
- Airway management procedures

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3609	SPEECH LANGUAGE PATHOLOGY	3	1	0	4

Objectives:

After completing this course, the student will be able to understand

- The different speech and language disorders,
- The basic concepts and tools required for diagnosing speech and language disorders
- The basics of assessment procedures for speech and language disorder
- The basic principles and intervention procedures for speech and language disorders,
- The clinical requirements to practice
- Different laws, social-cultural and ethical issues,
- Identification and prevention of speech and language disorders,
- Basic principles of providing counselling and guidance to clients and caregivers

Course Outcome – COs		Cognitive Skill
CO-01	To understand the concepts about diagnostic methods in speech language pathology	R, U, A
CO-02	To understand the concepts about therapeutic methods in speech language pathology	R, U, A
CO-03	To understand assessment and management method for speech disorders	R, U, A
CO-04	To understand assessment and management method for language disorders	R, U, A
CO-05	To understand issues in speech language pathology practice	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-05	S	N	N	M	M	S	M	M

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: BASIC CONCEPTS AND METHODS OF DIAGNOSTICS

12

- Introduction to Speech Language Disorders
- Definition and descriptions of delay, deviancy and disorders; impairment, disability and handicap
- Incidence and prevalence of speech and language disorders
- Causes of speech and language disorder
- Basic principles in assessment, evaluation and appraisal
- Tools for diagnosis- case history, interview, self-reports, questionnaire & observations
- Diagnostic models – SLPM, Wepman, Bloom and Lahey
- Types of diagnoses – Clinical diagnosis, direct diagnosis, differential diagnosis, diagnosis by treatment, diagnosis by exclusion, team diagnosis, instrumental diagnosis, provocative diagnosis, tentative diagnosis, advantage/disadvantages of each
- Characteristics of a diagnostic clinician
- Organization and basic requirements for clinical set up and team approach
- DSM, ICD classification and ICF

UNIT II: BASIC CONCEPTS AND METHODS OF THERAPEUTICS

12

- Basic concepts and terminologies in speech therapeutics
- General principles of speech and language therapy
- Speech therapy set-up
- Individual and group therapy

- Procedures and types of speech-language therapy
- Approaches to speech and language therapy – formal, informal and eclectic approaches
- Planning for speech and language therapy – goals, steps, procedures and activities
- Importance of reinforcement principles and strategies in speech and language therapy, types and schedules of rewards and punishment,
- Individual and group therapy
- AAC and other nonverbal methods of therapy

UNIT III: OVERVIEW OF BASIC ASSESSMENT AND MANAGEMENT OF SPEECH DISORDERS 12

- Causes of speech disorders
- Overview of assessment procedures for voice disorders, articulation and phonological disorders, and fluency disorders
- Overview of management procedures for voice disorders, articulation and phonological disorders, and fluency disorders
- Early identification and prevention of speech disorders
- Basic concepts in assessment and management of swallowing disorders

UNIT IV: OVERVIEW OF BASIC ASSESSMENT AND MANAGEMENT OF LANGUAGE DISORDERS 12

- Types, characteristics and classification of language disorder
- Causes of language disorders
- Overview of assessment procedures for child language disorders; adult language disorders; and neurogenic language disorders
- Overview of management procedures for child language disorders; adult language disorders; and neurogenic language disorders
- Early identification and prevention of language disorders
- Issues related to bi- /multilingualism

**UNIT V: OTHER ISSUES IN PRACTICE AS A SPEECH - LANGUAGE
PATHOLOGIST**

12

- Professional code of conduct – social, cultural and other ethical issues
- Scope of practice –different set ups and prerequisites
- Documentation of diagnostic, therapeutic and referral reports,
- Counselling, guidance, facilitation of parent participation and transfer of skills
- Evaluation of therapy outcome and follow up
- Evidence based practice
- Community based rehabilitation
- Role of itinerant speech therapist, Anganwadis, resource teachers etc
- Acts:PWD, National Trust, Consumer Protection, Noise Pollution and other public laws
- RCI, ISHA and other organizations controlling the field
- Facilities and concessions available for speech and hearing disabled

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3610	AUDIOLOGY	3	1	0	4

Objectives:

After completing the course, the student will be able to

- Understand and carryout experiments to measure differential sensitivity, loudness and pitch
- Take case history, administer the tuning fork tests and interpret the results
- Administer pure tone audiometry including masking on clinical population and appreciate the theoretical back ground of it
- Carryout different tests involved in speech audiometry and appreciate the theoretical back ground
- Carryout subjective calibration and daily listening checks of the audiometer
- Get adequate theoretical information necessary to understand concepts involved in objective calibration.

Course Outcome – Cos		Cognitive Skill
CO-01	To understand basic concepts of differential sensitivity, loudness and pitch	U, R, A
CO-02	To understand the concepts of case history taking and tuning fork tests	U, R, A
CO-03	To understand the concepts of pure tone audiometry	U, R, A
CO-04	To understand the concepts of speech audiometry	U, R, A
CO-05	To understand the concepts of clinical masking and basics of instrumental calibration	U, R, A

R- Remember, U-Understand, A-Apply, An- Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

PO CO	PO-A	PO-B	PO-C	PO-D	PO-E	PO-F	PO-G	PO-H

CO-03	S	N	M	S	M	L	L	L
CO-04	S	N	M	S	M	L	L	L
CO-05	S	N	M	S	M	L	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: DIFFERENTIAL SENSITIVITY

12

- Concept of differential sensitivity, just noticeable difference
- Weber's fraction
- Intensity discrimination
- Frequency discrimination
- Duration discrimination and temporal resolution
- Applications of JNDs
- Magnitude estimation and production.
- Loudness – equal loudness level contours and its application
- Loudness scales - sone, phone, Steven's power law
- Pitch- scales of pitch

UNIT II: CASE HISTORY AND TUNING FORK TESTS

12

- Need for case history, Basic of history taking, Essential factors to be included in case history for adults, Essential factors to be included in case history for children, Interpretation of case history
- Audiological evaluation – rationale and purpose, Principles, procedure, interpretation, advantages and disadvantages of Rinne, Schwabach, Weber and Bing tuning fork test, Audiometric version of Weber and Bing test

UNIT III: PURE TONE AUDIOMETRY

12

- Classification of audiometers, Parts of an audiometer, characteristics and specifications of transducers used (earphones, bone vibrators, loud speakers)
- Audiogram- concept and symbols used
- Clinical method of threshold estimation,
- Factors affecting air conduction threshold
- Bone conduction thresholds- measurements, factors effecting
- Permissible noise levels in the audiometric room.

UNIT IV: SPEECH AUDIOMETRY

12

- Importance and purpose
- Different types of stimuli used, Concept of phonetically and phonemically balanced
- Speech detection thresholds – procedure and application
- Speech reception thresholds – procedures and application.
- Word recognition scores –procedure and applications
- PIPB function – procedure and applications
- Factors affecting speech audiometry
- BC speech audiometry – procedure and its application
- Test materials available in various languages.

UNIT V: CLINICAL MASKING AND INSTRUMENTAL CALIBRATION

12

- Definition and different terminologies, Purpose and rationale of clinical masking
- Different types of stimuli employed in clinical masking
- Interaural attenuation and factors affecting interaural attenuation
- When to mask and how much to mask – importance of adequate noise levels
- Different procedures for masking
- Masking for speech audiometry
- Calibration definition and purpose
- Daily listening checks and subjective calibration
- Objective calibration of air conduction transducers
- Objective calibration of bone conduction transducers
- Frequency calibration.

UNIT I: BASIC CONCEPTS AND TERMINOLOGIES IN GENETICS

10

- Basics of genetics: Genes, Chromosomes, Traits, DNA structure, DNA replication, Mutations, DNA repair, Protein synthesis, Genetic code
- Mitosis, Meiosis
- Symbols used in pedigree construction
- Mendel's principles, Modes of inheritance, Mendelian Disorders, Exceptions to Mendel's principles, Non-traditional modes of inheritance

UNIT II: TECHNIQUES USED IN GENETICS

10

- Molecular techniques: Polymerase Chain Reaction (PCR), Single nucleotide polymorphism (SNP), Restriction enzymes, Restriction fragment length polymorphism (RFLP), DNA sequencing, Microarray, Next generation sequencing, Cloning
- Cytogenetics: Karyotyping, Fluorescence in situ hybridization (FISH), Comparative genomic hybridization (CGH), Numerical aberrations, Structural aberrations, Sex chromosome anomalies

UNIT III: GENETICS IN COMMUNICATION DISORDERS

10

- Identification of disease genes: Single gene disorders, Complex genetic disorders, Linkage analysis, LOD score, Genetic association studies, Genome- wide association studies (GWAS), Meta-analysis, Human genome mapping project (HGMP), Reference Sequence Database
- Communication disorders: Chromosomal syndromes, Single-gene syndromes, Polygenic multifactorial syndromes, Sporadic syndromes, Environmental syndromes
- Genetic components of communication impairment: Autism, Dyslexia, Mental Retardation, Cerebral Palsy, Stuttering, Syndromic hearing impairment, Non-syndromic hearing impairment
- Genetic counselling, Risk evaluation, Management of genetic disorders, Gene therapy

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3671	CLINICALS IN SPEECH LANGUAGE PATHOLOGY I	0	1	2	3

Objectives:

After completing this course, the student will be able to

- Appreciate the normal development of speech language and communication through subjective and objective measures.
- Carry out basic evaluation of speech, language and communication disorders and interpret the results.
- Understand and decide the speech and language stimulation technique based on client requirement
- Provide counselling and appropriate referral as per client requirement.

Course Outcome – COs		Cognitive Skill
CO-01	To understand normal and disordered speech and language skills from live and recorded samples	R, U, A
CO-02	To carry out language sampling and IPA transcription	R, U, A
CO-03	To administer standardized tests for delayed speech and language development.	R, U, A
CO-04	To understand and select speech and language stimulation techniques for various disorders.	R, U, A
CO-05	Prepare public education materials such as pamphlets for speech language hearing and communication disorders	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

PO CO	PO-A	PO-B	PO-C	PO-D	PO-E	PO-F	PO-G	PO-H
CO-01	M	S	S	S	S	N	L	S
CO-02	M	L	N	N	N	N	N	N

CO-05	M	L	S	S	S	N	S	S

S- Strong, M- Medium, L-Low, N- Not Relevant

PRACTICALS:

- Demonstrate normal aspects of speech and analyse perceptually variations in voice, articulation and fluency in different recorded speech samples of typical individuals at different age groups (children, adults and older adults) and sex.
- Demonstrate normal aspects of language and analyse perceptually variations in language in different recorded samples of typical individuals at different age groups (children, adults and older adults) and sex.
- Demonstrate stress, rhythm and intonation and variations in rate of speech and analyse perceptually variations in prosody in different recorded samples of typical individuals at different age groups (children, adults and older adults) and sex.
- Use IPA to transcribe spoken words.
- Record a standard passage, count number of syllables and words, identify syllable structure, syntactic structures in the passage.
- Oral mechanism examination on 5 normal children and 5 normal adults.
- Prepare a chart and show the developmental stages of speech and language behavior.
- Administer standardized tests for assessment of delayed speech and language

development such as REELS, SECS, LAT, 3DLAT, ALD each on any 2 children.

- Study the available normative data (Indian/Western) of speech such as respiratory, phonatory, resonatory and articulatory parameters.
- Measure the following in 5 normal subjects: (a) Habitual frequency (b) Frequency range (c) Intensity (d) Intensity range (e) Phonation duration (f) rate of speech (g) Alternate Motion Rates and Sequential Motion Rates (h) s/z ratio.
- Study the available normative data (Indian/Western) of language such as phonology, semantics, syntax, morphology and pragmatic measures.
- Perceptual analysis of speech and language parameters in normal (2 children and 2 adults and persons with speech disorders (3 adults + 3 children)).
- Prepare a model diagnostic report of a patient with speech and language disorder.
- Prepare a diagnostic and therapy kit.
- Make a list of speech language stimulation techniques and other therapy techniques for various speech disorders.
- Familiarize with the sources for referral and parent counselling procedures.
- Prepare a report on the available audiovisual material and printed material/pamphlets relating to speech-language pathology, public education of communication and hearing disorders, etc.
- Prepare a report on the available clinical facilities and clinical activities of the institute.

Clinical Practicum

- Observe the evaluation process and counselling of at least 5 different speech and language disorders in children.
- Observe the evaluation process and counselling of at least 5 different speech and language disorders in adults.

- Take case history of a minimum of 10 individuals (5 normal & 5 clients with complaints of speech-language problems).
- Observation of diagnostic procedures.
- Observe various therapeutic methods carried out with children and adults with speech and language disorder.

Total: 45 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3672	CLINICALS IN AUDIOLOGY	0	1	2	3

Objectives:

After completing this course, the student will be able to

- Carry out tests for differential sensitivity
- Administer case history on adults and children and correlate the results
- Carry out tuning fork tests
- Carry out puretone audiometry
- Carry out speech audiometry
- Carry out clinical masking and subjective calibration

Course Outcome – COs		Cognitive Skill
CO-01	To calculate measures of differential sensitivity	R, U, A
CO-02	To administer case history and tuning fork tests	R, U, A
CO-03	To perform puretone audiometry	R, U, A
CO-04	To perform speech audiometry	R, U, A
CO-05	To perform clinical masking and subjective calibration	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

PO CO	PO-A	PO-B	PO-C	PO-D	PO-E	PO-F	PO-G	PO-H
CO-01	S	L	S	S	L	M	L	L
CO-02	S	L	S	S	S	M	L	L
CO-03	S	L	S	S	S	M	L	L
CO-04	S	L	S	S	S	M	L	L
CO-05	S	L	S	S	S	M	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

PRACTICALS:

Calculate/derive the answers for following

- Calculate the relative intensities with different reference intensities.
- Calculate decibels when sound intensities are doubled, increased by 4 times
- Add decibels when two sounds with different intensities are produced simultaneously
- Collect pictures of audiometers that existed between 1920 and 1990.

Perform the following experiments

- Calculate reference equivalent sound pressure levels (RETSPL) for head phones and bone vibrator for any two frequencies using 30 participants.
- Measure most comfortable level and uncomfortable level on 10 participants with normal hearing sensitivity. Calculate the sensation levels of MCL and UCLs in above 10 participants.
- Measure difference limen of intensity, frequency and duration on 10 normal hearing adults and plot it in graphical form and interpret the results.
- Measure equal loudness level contours at minimum level, 40 dB SPL, 70 dB SPL (1 kHz) in 5 normal hearing adults.

- Measure sone and mel in 5 normal hearing adults using scaling techniques.
- Take case history on 5 adults and 5 children with hearing problem and correlate the information from case history to results of pure tone audiometry.
- Administer different tuning fork tests on 5 simulated conductive and 5 sensori neural hearing loss individuals.
- Carry out pure tone and speech audiometry on 10 normal hearing individuals.
- Carry out clinical masking on 10 normal hearing individuals with simulated conductive hearing loss and carry out clinical masking on 5 individuals with conductive hearing loss and 5 individuals with sensori-neural hearing loss.
- Carryout daily listening checks and subjective calibrations 20 times and observe objective calibration once
- Perform otoscopy and draw the tympanic membrane of 10 healthy normal individuals

Clinical Practicum

- Observe case history being taken on 5 adults and 5 children with hearing problem and correlate the information from case history to results of pure tone audiometry.
- Administer different tuning fork tests on 5 conductive and 5 sensori neural hearing loss individuals.
- Observe the pure tone audiometry being carried out on 30 clients.
- Plot the audiogram, calculate the pure tone average and write the provisional diagnosis of observed clients.
- Perform otoscopy (under supervision) on at least 1 client with following conditions: Tympanic membrane perforation, SOM, CSOM

Total: 45 Hours

CO-05	N	N	N	N	M	N	L	M

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: BASIC CONCEPTS IN VOICE AND ITS PRODUCTION

12

- Definition and functions of voice – biological and non-biological Parameters of voice.
- Structures and function of respiratory system for the purpose of phonation
- Laryngeal anatomy – Structural support of larynx, muscles, vocal fold microstructure, blood supply, and innervations
- Vocal tract resonance and voice quality
- Development of voice: Birth to senescence; structural and voice related changes
- Aerodynamic myo-elastic theory of voice production
- Voice mechanics – Physiologic, acoustic and aerodynamic correlates of voice
- Pitch and loudness changing mechanism, voice registers and voice quality
- Description of normal and abnormal voice: Parametric, pathologic/perceptual, social

UNIT II: CHARACTERISTICS AND PATHOPHYSIOLOGY OF VOICE DISORDERS

12

- Pathologies of the laryngeal mechanism: classification of voice disorders, incidence, and prevalence
- Etiology of voice disorders: voice misuse and abuse, medical related etiologies, primary disorder etiologies and personality related etiologies
- Pathologies of vocal fold cover (infective and trauma related secondary conditions) and muscular dysfunction

- Non-organic voice disorders: functional disorders, psychosomatic- functional aphonia and physiological- voice abuse, puberphonia
- Congenital voice disorders
- Neurological voice disorders
- Voice problems in systemic illnesses and endocrine disorders
- Voice problems in transgenders
- Voice problems in the elderly
- Voice problems in professional voice users: teachers and singers

UNIT III: ASSESSMENT OF VOICE

12

- Referral sources, medical examination and team approach
- Protocol for voice assessment: components and philosophies (ICF, ICD)
- Clinical voice laboratory: principles of instrumental measurements – electrical error, electrical safety, hygiene safety; recording of data; storage; patented softwares, free wares
- Perceptual evaluation of voice: GRBAS, CAPE –V
- Visualization procedures- indirect laryngoscopy, video laryngoscopy & stroboscopy
- Acoustic analysis of voice: F0 related measures, intensity related measures, quality related measures, phonetogram, DSI,
- Electroglottography and inverse filtering procedures
- Aerodynamic analysis of voice: static & dynamic measures
- Self-evaluation of voice: PROM, VHI, V-DOP
- Reporting of voice findings, normative comparisons, differential diagnosis

UNIT IV: MANAGEMENT OF VOICE

12

- Voice therapy orientation: basic principles, goal setting and approaches
- Vocal hygiene and preventive counselling
- Symptomatic voice therapy – voice facilitation techniques
- Psychological approaches to voice therapy – psychoanalysis, rational emotive therapy and cognitive behavior therapy
- Physiological approach – breathing and postural techniques
- Holistic voice therapy approaches -1: accent therapy, confidential voice therapy
- Holistic voice therapy approaches - 2: vocal function exercises, resonant voice therapy,

Lee Silverman voice therapy

- Medical and surgical procedures in the treatment of benign vocal fold lesions
- Pharmaceutical effects on voice
- phono surgery: re-innervation techniques, laryngeal framework surgeries, micro laryngeal excision
- Professional voice care

UNIT V: INTERVENTION STRATEGIES FOR VOICE DISORDERS

12

- Vocal trauma related disorders
- Functional voice disorders – inappropriate vocal components
- Functional aphonia
- Puberphonia/mutational falsetto
- Muscle tension dysphonia
- Sulcus vocalis
- Vocal fold palsy
- Spasmodic dysphonia
- GERD/LPR
- Benign vocal fold lesions requiring surgical intervention
- Post-operative care for benign vocal fold lesions disorders
- Documenting voice therapy outcomes

Practical:

- Record phonation and speaking samples (counting numbers) from five children, adult men, adult women, geriatric men and geriatric women. Note recording parameters and differences in material.
- Make inferences on age and sex differences across the samples obtained in the previous experiment using perceptual voice profiling. Make a note of differences in pitch, loudness, quality and voice control. Explain how voice reflects ones personality and other social needs.
- Perform an acoustic voice analysis on phonation sample and generate a voice report based on acoustic findings. Compare findings between men & women.
- Perform MPT and s/z ratio. Infer differences across age and sex.
- Perform spirometry or any other appropriate aerodynamic procedure. Infer differences across age and sex.

- Perform acoustic analysis on five abnormal voice samples.
- Observe and document findings from five laryngeal examinations (pre-recorded or live) such as VLS, stroboscopy or any other relevant.
- Administer a PROM on five individuals. Prepare a vocal hygiene checklist.
- Demonstrate therapy techniques such as vocal function exercise, resonant voice therapy, digital manipulation, push pull, relaxation exercises.

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3613	SPEECH SOUND DISORDERS	2	1	1	4

Objectives:

After completing this course, the student will be able

- To describe normal speech sound development and characterization of individuals with speech sound disorders.
- To perform phonological analysis and assessment of speech sound disorders.
- To plan intervention for individuals with speech sound disorders.

Course Outcome – Cos		Cognitive Skill
CO-01	To understand the basic concepts in the acquisition and development of speech sounds.	R, U, A
CO-02	To understand the general methods for the assessment of speech sound disorders.	R, U, A
CO-03	To understand the specific assessment procedures for speech sound disorders	R, U, A
CO-04	To understand the basic principles and techniques of speech therapy for speech sound disorders	R, U, A
CO-05	To understand the specific therapeutic approaches for the management of speech sound disorders.	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: SPEECH SOUND ACQUISITION AND DEVELOPMENT

12

- Fundamentals of articulatory phonetics - phonetic description of vowels & consonants.
- Phonology & phonological theories – generative phonology, natural phonology.
- Phonology & phonological theories – non-linear phonology, optimality theory.
- Methods to study speech sound acquisition – diary studies, cross sectional studies and longitudinal studies
- Speech sound acquisition
 - Birth to one year (development of infant speech perception, early speech production).
 - One to two years (consonant inventories, influence of phonological knowledge on vocabulary acquisition).
 - Two to five years (growth of phonetic, phonemic, phonotactic inventory – consonants, clusters, phonological patterns).
 - Above five years (speech sound mastery and development of literacy – phonological awareness).
 - Factors influencing speech sound acquisition
- Acoustics of speech sounds
- Speech intelligibility, factors affecting speech intelligibility, assessment of speech intelligibility
- Co articulation: types and effects

- Phonological development in bilingual children.
- Phonological development in Indian languages

UNIT II: ASSESSMENT OF SPEECH SOUND DISORDERS – I

12

- Current concepts in terminology and classification of speech sound disorders: Organically-based speech sound disorders, childhood apraxia of speech, Speech sound disorders of unknown origin, classification by symptomatology.
- Factors related to speech sound disorders: Structure and function of speech & hearing and oro-sensory mechanisms, cognitive – linguistic, psychosocial and social factors, metalinguistic factors related to speech sound disorders
- Introduction to assessment procedures: aims of assessment, screening and comprehensive assessment.
- Speech sound sampling procedures - issues related to single word and connected speech samples; imitation and spontaneous speech samples, contextual testing, recording of speech samples.
- Review of tests in English and other Indian languages - Single word articulation tests, deep articulation of articulation, and computerized tests of phonology.
- Influence of language and dialectal variations in assessment.
- Transcription of speech sample - transcription methods –IPA and extension of IPA; broad and narrow transcription.

UNIT III: ASSESSMENT OF SPEECH SOUND DISORDERS – II

12

- Introduction to independent and relational analysis.
- Independent analyses – phonetic inventory, phonemic inventory and phonotactic inventory (utility of independent analysis for analysis of speech of young children and children with severe speech sound disorders).
- Relational analyses – SODA, pattern analysis, (distinctive features, phonological process analysis).
- Phonological processes analyses - language specific issues, identification and classification of errors.
- Assessment of oral peripheral mechanism.
- Speech sound discrimination assessment, phonological contrast testing.
- Stimulability testing.
- Determining the need for intervention–speech intelligibility and speech severity

assessment.

- Factors influencing target selection – stimulability, frequency of occurrence, developmental appropriateness, contextual testing, and phonological process analysis.
- Case study – Documenting the assessment findings and determining the need for intervention.

UNIT IV: MANAGEMENT – I

12

- Basic considerations in therapy – target selection, basic framework for therapy, goal-attack strategies, organizing therapy sessions, individual vs. group therapy.
- Treatment continuum – establishment, generalization and maintenance; measuring clinical change, Facilitation of generalization, Maintenance and termination from therapy.
- Motor-based treatment approaches – Principles of motor learning.
- Discrimination/ear training and sound contrast training.
- Establishing production of target sound – imitation, phonetic placement, successive approximation, context utilization
- Traditional approach, contextual/sensory-motor approaches.
- General guidelines for motor-based treatment approaches.
- Use of technology in articulation correction

UNIT V: MANAGEMENT – II

12

- Core vocabulary approach.
- Introduction to linguistically-based treatment approaches- Distinctive feature therapy, Minimal pair contrasts therapy, Metaphon therapy, Cycles approach, Broad-based language approaches.
- General guidelines for linguistically-based approaches.
- Phonological awareness and phonological disorders.
- Phonological awareness intervention for preschool children
- Adapting intervention approaches to individuals from culturally and linguistically diverse backgrounds.
- Role of family in intervention for speech sound disorders.

Practicals:

- List the vowels and consonants in your primary language and provide phonetic and acoustic descriptions for the speech sounds.
- Identify the vowels and consonants of your language on the IPA chart and practice the IPA symbols by transcribing 25 words.
- Make a list of minimal pairs in English.
- Make a list of minimal pairs in any language other than English.
- Identify the stages of speech sound acquisition by observations from videos of children from birth to 5 years of age.
- Record the speech of a two year old typically developing child, transcribe and analyze the speech sample.
- Record the speech of one typically developing child from 3-5 years of age (include single word and connected speech samples), transcribe the sample, and perform phonological assessment.
- Analyze transcribed speech samples of typically developing children – practice independent and relational analysis.
- Practice instructions for phonetic placement of selected sounds.
- Develop a home plan with activities for any one section of phonological awareness in English and in one Indian language.

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3614	DIAGNOSTIC AUDIOLOGY- BEHAVIOURAL TESTS	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Choose individualized test battery for assessing cochlear pathology, retro cochlear pathology, functional hearing loss, CAPD, vestibular dysfunctions, tinnitus and hyperacusis
- Independently run the tests and interpret the results to identify the above conditions
- Use the information for differential diagnosis and make adjustments in the test parameters to improve sensitivity and specificity of tests
- Make appropriate diagnosis based on the test results and suggest referrals.

Course Outcome – COs		Cognitive Skill
CO-01	Understand the basic concept of test battery approaches in diagnostic audiology and clinical indications for cochlear pathology, retro-cochlear pathology, central auditory processing disorders, functional hearing loss and vestibular disorders.	U, R, A
CO-02	Understand different tests to identify cochlear and retro cochlear pathology	U, R, A
CO-03	Understand the tests for functional hearing loss	U, R, A
CO-04	Understand different tests to identify central auditory processing	U, R, A
CO-05	Understand different tests for the assessment of vestibular disorders, tinnitus, and hyperacusis	U, R, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

PO CO	PO-A	PO-B	PO-C	PO-D	PO-E	PO-F	PO-G	PO-H

CO-04	S	S	S	S	M	N	S	M
CO-05	N	N	N	N	M	N	L	M

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: INTRODUCTION TO DIAGNOSTIC AUDIOLOGY

12

- Characteristics of a diagnostic test, difference between screening and diagnostic test, functions of a diagnostic test in Audiology.
- Need for test battery approach in auditory diagnosis and integration of results of audiological tests, cross-check principle.
- Concept of sensitivity, specificity, true positive, true negative, false positive, false negative, hit rate.
- Definition of behavioural and physiological tests and their characteristics in diagnostic audiology.
- Theories and physiological bases of recruitment
- Theories and physiological bases of adaptation.
- Clinical indications for cochlear pathology, retro-cochlear pathology, central auditory processing disorders, functional hearing loss, vestibular disorders

UNIT II: TESTS TO IDENTIFY COCHLEAR AND RETRO COCHLEAR PATHOLOGY

12

- ABLB, MLB and SISI tests
- Behavioural tests of adaptation
- Bekesy audiometry
- Brief tone audiometry

- PIPB function
- Glycerol test,
- Test to identify dead regions of cochlea

UNIT III: TESTS TO DIAGNOSE FUNCTIONAL HEARING LOSS

12

- Behavioural and clinical indicators of functional hearing loss
- Pure tone tests including tone in noise test, Stenger test, BADGE, puretone DAF
- Speech tests including Lombard test, Stenger test, lip-reading test, Doerfler-Stewart test, Low level PB word test, Yes-No test, DAF test
- Identification of functional hearing loss in children: Swinging story test, Pulse tone methods

UNIT IV: ASSESSMENT OF CENTRAL AUDITORY PROCESSING

12

- Definition, different behavioral processes.
- Behavioral and clinical indicators of central auditory processing disorders
- Bottle neck and subtlety principles and their implications.
- Tests to detect central auditory processing disorders: Monaural low redundancy tests - filtered speech tests, time compressed speech test, speech-in-noise test, SSI with ICM, other monaural low redundancy tests.
- Dichotic speech tests – Dichotic digit test, Staggered spondaic word test, Dichotic CV test, SSI with CCM, Competing sentence test, other dichotic speech tests.
- Binaural interaction tests – RASP, BFT, MLD, other binaural interaction tests
- Tests of Temporal processing – pitch pattern test, duration pattern tests, other temporal ordering tests, gap detection test, TMTF.
- Variables influencing the assessment of central auditory processing: Procedural and subject variables.
- Test findings of important tests in subjects with central auditory disorders: brainstem lesion, cortical, CAPD in children.

UNIT V: ASSESSMENT OF PERSONS WITH VESTIBULAR DISORDER, TINNITUS, HYPERACUSIS

12

- Introduction to structure and function of vestibular system, Vestibular ocular reflex and vestibulo spinal reflex.
- Overview on other systems involved in balance.

- Signs and Symptoms of vestibular disorders
- Team in the assessment and management of vestibular disorders
- Behavioral tests to assess vestibular functioning: Fukuda stepping test, tandem gait test, finger nose pointing, Romberg test, Sharpened, Romberg test, Dix-Hallpike test, Log-roll test,
- Overview of tinnitus and hyperacusis and tests for assessment
- Pitch matching, loudness matching, residual inhibition, Feldman masking curves
- Johnson Hyperacusis Dynamic Range Quotient.

Practicals:

- Administer ABLB, MLB and prepare ladder gram (ABLB to be administered by blocking one ear with impression material)
- Administer classical SISI on 3 individuals and note down the scores
- Administer tone decay tests (classical and its modifications) and note down the results (at least 3 individuals)
- Administer Bekesy audiometry
- Administer Brief tone audiometry
- Plot PIPB function using standardized lists in any 5 individuals
- Administer the tests of functional hearing loss (both tone based and speech based) by asking subject to malingering and having a yardstick of loudness.
- Administer CAPD test battery to assess different processes on 3 individuals and note down the scores
- Administer Fukuda stepping test, Tandem gait test, Finger nose pointing, Romberg test, Sharpened Romberg test, Dix-Hallpike test, Log-roll test on 5 of the individuals each and note down the observations.
- Estimate the pitch and loudness of tinnitus in 2 persons with tinnitus (under supervision). Assess the residual inhibition in them.
- Plot Feldman masking curves for a hypothetical case
- Administer Johnson Hyperacusis Dynamic Range Quotient on any 2 of the individuals and note down the scores.

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3615	AMPLIFICATION DEVICES	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Assess the candidacy for hearing aids and counsel accordingly
- Evaluate the listening needs and select the appropriate hearing aid
- Independently program digital hearing aids as per the listening needs of the client
- Independently assess the benefit from the hearing aid using subjective and objective methods
- Make all types of ear moulds
- Counsel the parents/care givers at all stages

Course Outcome – COs		Cognitive Skill
CO-01	To understand development of different types of amplification devices	R, U, A
CO-02	Learn basic elements of hearing aids: Microphone, Amplifier, Receiver/ vibrator, Cords, Batteries.	R, U, A
CO-03	Learn about Classification and Types of hearing aids	R, U, A
CO-04	To understand Technological aspects in hearing aids	R, U, A
CO-05	Study about Electro-acoustic measurements for hearing aids	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-05	N	N	N	N	M	N	L	M

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: TYPES OF HEARING AIDS

12

- Historical development of hearing aids: development of concept of amplification, development of different types of amplification devices,
- Review of basic elements of hearing aids: Microphone, Amplifier, Receiver/vibrator, Cords, Batteries.
- Classification and Types of hearing aids
 - Body level, ear level, in the ear, ITC, invisible in the canal, CIC
 - Binaural, pseudo binaural, monaural
 - Programmable, trimmer digital and digital hearing aids
 - Directional hearing aids
 - Modular hearing aids
 - RIC hearing aids
 - Implantable hearing aids
 - Master hearing aids
 - CROS hearing aids.
- Group amplification – hard wired, induction loop, FM, infrared. Assistive listening devices – types and selection (Telephones, Television, typing technology)

UNIT II: TECHNOLOGICAL ASPECTS IN HEARING AIDS

12

- Routing of signals, head shadow/baffle/diffraction effects
- Output limiting and issues related to them: Peak clipping, compression
- Concept and use of compression in hearing aids: BILL, TILL, PILL, Wide Dynamic Range Compression, Syllabic Compression, Dual Compression
- Signal processing in hearing aids – BILL, TILL, PILL
- Signal enhancing technology
- Noise reduction algorithms
- Extended low frequency amplification, frequency lowering technology (transposition, compression).
- Recent advances in hearing aids

UNIT III: ELECTRO-ACOUSTIC MEASUREMENTS FOR HEARING AIDS

12

- Purpose and Parameters to be considered: OSPL90, SSPL90, HFA SSPL90, Gain, Full on Gain, HFA Full on Gain, Reference test Gain, Basic Frequency Response, Total Harmonic distortion, Intermodulation Distortion, input Output functions
- Instrumentation and procedure
- Variables affecting EAM
- Electro-acoustic measurements, BIS, IEC and ANSI standards
- Environmental tests.
- Care, maintenance and troubleshooting of hearing aids.
- Counselling and orienting the hearing aid user (Client and significant others)

UNIT IV: SELECTION OF HEARING AIDS

12

- Pre-selection factors
- Prescriptive and comparative procedures
- Functional gain and insertion gain methods
- Use of impedance, OAEs and AEPs audiometry
- Hearing aids for conductive hearing loss
- Hearing aids for children
- Hearing aids for elderly
- Selection of non-linear programmable and digital hearing aids
- Hearing aid programming

- Methods for assessing hearing aid benefit
- Real ear insertion measurements for verification of hearing aid benefit: REIG, REUR, REAR, REOR, RESR, REIG, REAG, RECD
- Acoustic feedback in hearing aids

UNIT V: MECHANO-ACOUSTIC COUPLERS (EAR MOLDS)

12

- Different types of molds
- Procedure for hard molds and soft mold
- UV curing methods
- Special modifications in the ear molds: Vents (diagonal and parallel), deep canal molds, short canal, horns, Libby horn, reverse horn, acoustic modifier
- Effects of mechano-acoustic couplers on the hearing aid output

Practicals:

- Listen to the output of different types and classes of hearing aids (monaural, binaural, analog, digital hearing aids), in different settings
- Troubleshoot hearing aids: Check the continuity of the receiver cord using multi meter, measure the voltage of different sized batteries using multi meter, Check voltage of batteries of different types and sizes
- Carry out electroacoustic measurements for the body level and ear level hearing aids
- Program the hearing aid for different configuration and degrees of hearing loss (at least 5 different audiograms) using different prescriptive formulae
- Program the hearing aid for different listening situations (at least 3 different situations)
- Vary the compression settings in a digital hearing aid and note down the differences in the output
- Perform real ear insertion measurements using different hearing aids (body level and ear level, hearing aids of different gains)
- Compare speech perception through conventional BTE and RIC hearing aids using a rating scale
- Observe assistive listening devices such as telephone amplifier, vibro-tactile alarms, note down the candidacy and their utility.
- Administer a questionnaire to assess hearing aid benefit on 2 persons using hearing aids.
- Carry out a role play activity of counselling a hearing aid user Ear Molds

- Take impression for the ear mold using different techniques, different methods and using different materials
- Make hard mold for any 2 ears Make soft mold for any 2 ears
- Make vent in hard molds you made

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3673	CLINICALS IN SPEECH LANGUAGE PATHOLOGY II	0	1	2	3

Objectives:

After completing this course, the student will be able to

- Know the procedures to obtain speech and language samples
- Know methods to perform OPME
- Understand and perform the formal and informal assessment of speech and language
- Analyse speech and language components
- Transcribe different samples collected
- Perform case history, language evaluation and speech sound evaluation in different population with speech and language disorders

Course Outcome – Cos		Cognitive Skill
CO-01	To understand different tools used to assess speech and language disorders by obtaining their samples	R, U, A
CO-02	To understand methods to examine oral peripheral mechanism structures and to perform them	R, U, A
CO-03	To evaluate speech and language disorders using informal and formal standardized tools	R, U, A
CO-04	To analyze speech and language components and transcribe the samples collected	R, U, A
CO-05	To perform case history, language evaluation and speech sound evaluation	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

S- Strong, M- Medium, L-Low, N- Not Relevant

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester.
- After completion of clinical postings in Speech –language diagnostics, the student will know (concepts), know how (ability to apply), show (demonstrate in a clinical diary/log book based on clinical reports/recordings, etc), and do (perform on patients/ client contacts) the following:

Know

- Procedures to obtain a speech language sample for speech & language assessment from children of different age groups such as pre schoolers, kindergarten, primary school and older age groups.
- Methods to examine the structures of the oral cavity/organs of speech.
- The tools to assess language abilities in children (with hearing impairment, specific language impairment & mixed receptive language disorder).
- Development of speech sounds in vernacular and linguistic nuances of the language.

Know how

- To evaluate speech and language components using informal assessment methods. To administer at least two standard tests for childhood language disorders.
- To administer at least two standard tests of articulation/ speech sounds.
- To assess speech intelligibility.

Show

- Analysis of language components – Form, content & use – minimum of 2 samples.
- Analysis of speech sounds at different linguistic levels including phonological processes – minimum of 2 samples.
- Transcription of speech language samples – minimum of 2 samples.
- Analyse differences in dialects of the local language.
- Case history - minimum of 5 individuals with speech & language disorders.
- Oral peripheral examination - minimum of 5 individuals.
- Language evaluation report – minimum of 5.
- Speech sound evaluation report – minimum of 5

Total: 45 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3674	CLINICALS IN AUDIOLOGY II	0	1	2	3

Objectives:

After completing this course, the student will be able to

- Understand methods to calibrate audiometers
- Administer speech audiometry using different materials employed
- Administer pure tone audiometry using appropriate masking technique and to calculate different measures of the test to interpret the result
- Carryout tuning fork tests in different types of hearing loss and interpret the result
- Perform case history and to analyse and correlate the results
- Plot audiogram for different degrees and types of hearing loss

Course Outcome – Cos		Cognitive Skill
CO-01	To understand methods to calibrate audiometers	R, U, A
CO-02	To carryout detailed case history and analyze the information	R, U, A
CO-03	To perform tuning fork tests in different types of hearing loss	R, U, A
CO-04	To perform pure tone audiometry using appropriate masking procedure, plot the audiogram, interpret the result and to calculate different measures from the result of the test	R, U, A
CO-05	To perform speech audiometry using appropriate materials	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester, however, not just limited to these areas.
- After completion of clinical postings in auditory diagnostics and auditory rehabilitation, the student will Know (concept), know how (ability to apply), show (demonstrate in a clinical diary/log book), and do (perform on patients/ client contacts) the following:

Know:

- Methods to calibrate audiometer.
- Materials commonly employed in speech audiometry.
- Calculation pure tone average, % of hearing loss, minimum and maximum masking levels.
- Different types of hearing loss and its common causes

Know-how:

- To obtain detailed case history from clients or parents/guardians.
- To carryout commonly used tuning fork tests.
- To administer pure tone audiometry including appropriate masking techniques on adults using at least techniques
- To administer tests to find out speech reception threshold, speech identification scores, most comfortable and uncomfortable levels on adults.

Show:

- Plotting of audiograms with different degree and type with appropriate symbols – 2 audiograms per degree and type
- Detailed case history taken and its analysis
- Calculation of degree, type and percentage of hearing loss on 5 sample conditions

Do:

- Case history on at least 5 adults and 3 children with hearing disorders
- Tuning fork test on at least 2 individuals with conductive and 2 individuals with sensori-neural hearing loss
- Pure tone audiometry with appropriate masking on 5 individuals with conductive, 5 individuals SN hearing loss and 3 individuals with unilateral/asymmetric hearing loss

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference. External evaluation: Spot test, OSCE, Record, Viva-voce, case work

SEMESTER IV

SL. No	Course Code	Course Title	L	T	P	C

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: NEURO-DEVELOPMENTAL PROCESSES IN SPEECH PRODUCTION AND MOTOR SPEECH DISORDERS 12

- Review of neuro-anatomy (cerebral cortex, sub-cortical structures, brainstem, cerebellum, spinal cord & cranial nerves, pyramidal and extra-pyramidal systems)
- Sensory-motor integration (spatial temporal planning, motor planning and feedback)
- Anatomic development of speech production systems
- Development of neural pathways of speech motor control (brain maturation, reflexes, sensory and motor)
- Dysarthria in children – cerebral palsy
 - disorders of tone (spastic, flaccid): definition, etiology, characteristics and associated problems
 - disorders of movement (hyperkinetic, hypokinetic)
 - disorder of balance (ataxia): definition, etiology, characteristics and associated problems
- Dysarthria in children – lower motor neuron and other syndromes with motor speech disorders
- Childhood apraxia of speech and nonverbal oral apraxia: definition, characteristics, and classification

UNIT II: ASSESSMENT OF MOTOR SPEECH DISORDERS IN CHILDREN 12

- Case history and developmental neurological evaluation – primitive postural and oro-pharyngeal reflexes, cranial nerve examination
- Assessment of oral sensory and motor capacity – Oral peripheral mechanism examination, neuro- muscular status
- Assessment of speech sub-systems – quantitative and qualitative
- Assessment of speech intelligibility and comprehensibility
- Assessment of associated problem
- Speech assessment with specific reference to childhood apraxia of speech – Phonetic and phonemic inventory, phonotactics and syllable sequencing, variability of errors, speech intelligibility, fluency and prosody
- Test materials – checklist for childhood apraxia of speech, screening test for developmental apraxia of speech

UNIT III MANAGEMENT OF CHILDHOOD DYSARTHRIA 12

- Team approach in rehabilitation of motor speech disorders in children
- Neuro-developmental therapy
- Non speech oral-motor exercises: its application for children with dysarthria
- Management of drooling
- Behavioral management of respiratory, phonatory, resonatory and articulatory subsystems
- Prosthetic appliances in treatment of childhood dysarthria
- AAC in management of motor speech disorders- role of devices, AAC team, candidacy and pre-requisites, symbol selection, techniques, assessment for AAC, effective use of AAC.
- Case studies: Planning intervention for children with dysarthria

UNIT IV MANAGEMENT OF CHILDHOOD APRAXIA OF SPEECH 12

- Principles of motor learning
- Integral stimulation – dynamic temporal cueing
- Multisensory and tactile cueing techniques (motor kinesthetic speech training, sensory motor approach, PROMPTS, Touch cue method & speech facilitation)
- Gestural cueing techniques (signed target phoneme therapy, adapted cueing techniques,

cued speech, visual phonics, & Jordon's gestures)

- Miscellaneous techniques (melodic intonation therapy, multiple phonemic approach, & instrumental feedback)
- Cognitive/ conceptual/ linguistic/ phonological remedial approaches - phonotactics
- Other approaches: Vowel and diphthong remediation techniques (Northampton (Yale) vowel chart and Alcorn symbols), Nancy Kauffman's speech praxis treatment kit
- Use of AAC in childhood apraxia of speech
- Evidence-based practice in intervention for childhood apraxia of speech
- Case studies: Planning intervention for childhood apraxia of speech

UNIT V: FEEDING AND SWALLOWING DISORDERS IN CHILDREN

12

- Embryology- periods and structures of development
- Anatomical structures of swallowing- upper aero digestive system, anatomic difference between adults and children
- Physiology of swallowing- swallow phases, neural control of swallowing, reflexes related to swallowing, suckling and sucking, airway and swallowing
- Terms involved in dysphagia and development of feeding skills
- Causes of dysphagia in children
- Signs and symptoms of dysphagia in children
- Assessment – inferences from neural developmental assessment, cranial nerve examination, assessment scales, nutritive and non-nutritive assessment, instrumental assessment (VFS, cervical auscultation), gastrointestinal evaluation
- Management: positioning, oral- motor treatment, team approach, non-oral feeding, transitional feeding, modifications in feeding
- Role of speech-language pathologist in neonatal intensive care with reference to feeding and swallowing

Practicals:

- With the help of models, charts and software, identify the motor control centers in the brain.
- Perform oro-motor examination in five children and adults and compare
- Identify oro-motor reflexes (rooting, suckling, & phase bite) in 5 infants.
- Demonstrate normal posture and breathing patterns required for varied speech tasks. Alter the postures and breathing patterns and notice changes in speech patterns.

- Assess DDK rate in five typically developing children.
- Rate intelligibility of speech in five typically developing children. Discuss factors that influenced speech intelligibility and their ratings.
- Observe and record (a) physical status, (b) oral sensory motor abilities and vegetative skills, (c) respiration, (d) phonation, (e) resonance, (f) articulation and (g) language abilities in five typically developing children. Compare these with observations made from children with motor speech disorders.
- Perform oro-motor exercises – isotonic and isometric. Discuss strategies to modify exercises for children.
- Identify from video the AAC system such as low technology vs high technology systems and different symbol system, ie, Bliss symbols, IICP symbols and different signing systems –Makaton.
- Observe feeding and swallowing skills in different age groups of children: 2 newborns; 2 infants, 2 toddlers, and 2 older children.
- Identify the differences in feeding methods, food consistencies, texture, quantity, feeding habits, feeding appliances used by these children.

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3617	CHILD LANGUAGE DISORDERS	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Understand the process of acquisition of language and factors that influence its development in children.
- Understand the methods to identify and assess language delay and deviance in children.
- Select appropriate strategies for intervention.
- Counsel and provide guidance to parents/caregivers of children with language disorders.

Course Outcome – COs		Cognitive Skill
CO-01	To understand bases of language acquisition, language development and language disorders	R, U, A
CO-02	To understand definition, classification, causes and characteristics of language disorders in children	R, U, A
CO-03	To understand the assessment of language in children	R, U, A
CO-04	To understand the principles and techniques for intervention for language disorders	R, U, A
CO-05	To understand specific intervention plan for different populations	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-05	S	L	S	S	M	M	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

UNITI: BASES OF LANGUAGE ACQUISITION, DEVELOPMENT AND DISORDERS 12

- Theories of language acquisition
 - Biological, Psycholinguistic/syntactic theory
 - Cognitive, social interaction/pragmatic, information processing, behavioral
- Pre-cursors for normal development of language
- Development of components of language from birth to two years (pre-linguistic/presymbolic to symbolic)
- Development of components of language during preschool period
- Development of components of language during early school age and beyond
- Basic concepts and terminologies of language development in bilingual children – simultaneous versus sequential language acquisition, additive and subtractive bilingualism
- Process of second language acquisition, variables influencing second language acquisition
- Development of language in culturally diverse environments and exceptional circumstances – neglect and abuse, twins, low-socio economic background
- Over view of language disorders – definition and classification based on ICD, DSM
- Application of ICF in language disorders

UNIT II: LANGUAGE DISORDERS – DEFINITION, CLASSIFICATION, CAUSES, AND CHARACTERISTICS

12

- Intellectual disability: definition, classification, causes and characteristics
- Autism spectrum disorders: definition, classification, causes and characteristics
- Attention deficit hyperactive disorder: definition, classification, causes and characteristics
- Language impairment - mixed receptive and expressive language disorder, specific language impairment: definition, classification, causes and characteristics
- Learning disability: definition, classification, causes and characteristics
- Acquired childhood aphasia: definition, classification, causes and characteristics
- Sensory impairments and language disorders: types, causes and characteristics
- Syndromic conditions leading to language difficulties: William syndrome, fragile x syndrome, Down syndrome
- Other developmental disabilities: deaf-blind, cerebral palsy and multiple disabilities.

UNIT III: ASSESSMENT OF LANGUAGE IN CHILDREN

12

- Preliminary components of assessment: Case history, screening, evaluation of environmental, linguistic & cultural variables.
- Methods to assess children with language disorder: Formal versus informal assessment; types of assessment materials: assessment scales, observational checklists, developmental scales; standardization, reliability, validity, sensitivity and specificity of test materials
- Informal assessment - pre-linguistic behavior, play, mother-child interaction
- Language sampling: planning and collecting representative sample; strategies to collecting language sample, audio-video recording, transcription
- Analysis of language sample: Specific to various components of language such as phonology, morphology, syntax, semantics and pragmatics.
- Test materials for assessing language skills: Assessment of Language Development (ALD), 3D-Language Assessment Test, Linguistic Profile Test, Com-DEALL checklist, other Indian and global tests
- Test materials used for children with developmental delay, intellectual disability: Madras Developmental Program Scale, Bayley's Scale for infant and toddler development

- Test materials used for children with autism spectrum disorder: Modified-Checklist for Assessment of Autism in Toddlers, Childhood Autism Rating Scale, Indian Scale for Assessment of Autism
- Other test materials used for children with ADHD, ACA, LD (NIMH battery for assessment of Learning Disability)
- Documenting assessment results: diagnostic report, summary report and referral report specific to disorder
- Differential diagnosis of language disorders in children

UNIT IV: MANAGEMENT OF LANGUAGE DISORDERS IN CHILDREN – I 12

- General principles and strategies of intervention in children with language impairment – purpose of intervention, basic approaches to language intervention (developmental or normative approach, functional approach)
- Types of service delivery models - Individuals versus group; direct versus telerehabilitation; structure of therapy session, setting the environment, furniture, seating arrangements
- Reinforcement in language therapy, types and schedules of reinforcement
- Choice of language for intervention, incorporating principles of multiculturalism into treatment activities
- Choosing and framing goals and Objectives: SMART Objectives
- Specific treatment techniques:
 - Incidental teaching, self-talk, parallel talk, expansion, extension, recasting, joint routines, joint book reading,
 - whole language, modifying linguistic input, communicative temptations drill, modelling,
 - Focused stimulation, vertical structuring, milieu teaching, and model
- Caregivers and family in intervention: Structured and informal approaches

UNIT V: MANAGEMENT OF LANGUAGE DISORDERS IN CHILDREN – II 12

- Team approach to intervention
- Augmentative and alternative communication – types (aided and unaided) and application in child language disorders
- Specific approaches to management of children with Autism: PECS, Lovaas, TEACCH, Com-DEALL, ABA, Facilitated Communication

- Approaches to management of children with LD
- Strategies to facilitate language skills in children with disorders such as intellectual disability: Redundancy, chunking, chaining
- Use of technology in language intervention
- Home plan and counselling for children with language disorders
- Documentation specific to the disorder: pre-therapy; lesson plan; SOAP notes
- Documentation specific to the disorder: summary report, referral report
- Decision making in therapy: transition to next objective, termination of therapy

Practicals

- Record mother-child interaction of one typically developing child in the age range of 0-1, 1-2, 2-4, 4-6 and 6-8 years of age. Compare linguistically the out puts from the mother and the child across the age groups. Make inferences on socio cultural influences in these interactions.
- Make a list of loan words in two familiar languages based on interaction with 10 typically developing children in the age range of 2-4, 4-6, 6-8 and 8-10 years. Discuss the influence of bi- or multilingualism on vocabulary.
- Record a conversation and narration sample from 3 children who are in preschool kindergarten, and primary school. Perform a language transcription and analyze for form, content and use.
- Administer 3D LAT, ALD, LPT, Com DEALL checklist on 2 typically developing children.
- Draft a diagnostic report and referral letter for a child with language disorder.
- Demonstrate general language stimulation techniques and discuss the clinical application.
- Demonstrate specific language stimulation techniques with appropriate materials and discuss its clinical applications.
- Draft Subjective Objective Assessment Plan (SOAP) for a pre-recorded sample of a 45-minute session of intervention for a child with language disorder.
- Draft a lesson plan for a child with language disorder.
- Draft a discharge summary report for a child with language disorder

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3618	DIAGNOSTIC AUDIOLOGY PHYSIOLOGICAL TESTS	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Justify the need for using the different physiological tests in the audiological assessment
- Independently run the tests and interpret the results to detect the middle ear, cochlear and retro cochlear pathologies and differentially diagnose
- Design tailor-made test protocols in immittance, AEPs and OAEs as per the clinical need
- Make appropriate diagnosis based on the test results and suggest referrals.

Course Outcome – Cos		Cognitive Skill
CO-01	To understand the concept of immittance evaluation	R, U, A
CO-02	To understand about Auditory brainstem response	R, U, A
CO-03	To understand an overview on other auditory evoked potentials	R, U, A
CO-04	To understand the concepts of otoacoustic emissions	R, U, A
CO-05	To understand the physiological tests for assessment of vestibular system	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-05	S	L	S	S	L	M	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: IMMITTANCE EVALUATION

12

- Clinical significance of physiological tests in audiology
- Immittance evaluation: Principle of immittance evaluation: Concept of impedance and admittance, their components.
- Tympanometry: definition, measurement procedure, response parameters, their measurement and normative, classification of tympanogram, clinical significance of tympanometry
- Eustachian tube functioning tests of tympanometry: basics of pressure equalization function of ET, Valsalva, Toynbee, William's pressure swallow, inflation-deflation test
- Overview on multicomponent and multi-frequency tympanometry
- Overview on wide band reflectance and wide band tympanometry
- Reflexometry: Definition, acoustic reflex pathway, measurement procedure, clinical applications of acoustic reflexes, special tests

UNIT II: AUDITORY EVOKED POTENTIALS (AEPS) - AUDITORY BRAINSTEM RESPONSE (ABR)

12

- Introduction and classification of AEPs
- Instrumentation of AEP
- Principles of AEP recording techniques
- Auditory brainstem response generators

- Protocol and procedure of recording auditory brainstem response
- Factors affecting auditory brainstem responses
- Clinical applications of ABR
- ABR in the pediatric population
- Role of ABR in infant hearing screening

UNIT III: OVERVIEW OF OTHER AEPS

12

- ECochG
- Auditory Middle Latency Responses (AMLR) and their clinical application
- Auditory Long Latency Responses (Obligatory responses) and their clinical applications
- Other long latency potentials such as
 1. P300,
 2. MMN,
 3. P600,
 4. N400,
 5. T- complex,
 6. CNV and their clinical applications.
- ASSR: Instrumentation, recording and clinical applications
- Brainstem responses to speech and other complex signals.

UNIT IV: OTOACOUSTIC EMISSIONS

12

- Introduction to otoacoustic emissions
- Origin and classification of OAEs
- Instrumentation
- Procedure of OAE measurement: SOAE, TEOAEs, and DPOAEs
- Interpretation of results: SOAE, TEOAEs, and DPOAEs
- Clinical applications of OAEs: SOAE, TEOAEs, and DPOAEs
- Contralateral suppression of OAEs and its clinical implications.

- Electronystagmography: procedure, interpretation, clinical applications.
- Videonystagmography
- Videoocculograph
- Vestibular Evoked Myogenic Potentials
- Overview of Rotatory chair test, video Head Impulse Test
- Overview of Dynamic Posturography.

Practicals:

- Measure admittance in the calibration cavities of various volumes and note down the observations
- Calculate Equivalent ear canal volume by measuring static admittance in an uncompensated tympanogram (10 ears)
- Do tympanogram in the manual mode and measure peak pressure, peak admittance and ear canal volume manually using cursor (10 ears).
- Measure gradient of the tympanogram (10 ears)
- Administer Valsalva and Toynbee and William's pressure swallow test (5 ears)
- Record acoustic reflex thresholds in the ipsi and contra modes, (10 ears)
- Plot Jerger box pattern for various hypothetical conditions that affect acoustic reflexes and interpret the pattern and the corresponding condition.
- Carry out Acoustic reflex decay test and quantify the decay manually using cursor (5 individuals).
- Trace threshold of ABR (in 5 dB nHL steps near the threshold) for clicks and tone bursts of different frequencies (2 persons) and draw latency intensity function.
- Record ABR using single versus dual channels and, note down the differences.
- Record ABR at different repetition rates in 10/sec step beginning with 10.1/11.1 per second. Latency-repetition rate function needs to be drawn.
- Record with each of three transducers (HP, insert phones and bone vibrator) and polarities and draw a comparative table of the same. Students should also record with different transducers without changing in the protocol in the instrument and calculate the correction factor required.
- Record ASSR for stimuli of different frequencies and estimate the thresholds

- Record TEOAEs and note down the amplitude, SNR, noise floor and reproducibility at octave and mid-octave frequencies. Note down the stimulus stability and the overall SNR (10 ears).
- Record DPOAEs and note down the amplitude, SNR, noise floor and reproducibility at octave and mid-octave frequencies (10 ears)

Total : 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3619	IMPLANTABLE HEARING DEVICES	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Assess candidacy for bone anchored hearing devices, middle ear implants, cochlear implants, and ABI
- Select the appropriate device depending on the audiological and non-audiological findings.
- Handle post-implantation audiological management
- Assess the benefit derived from implantation
- Counsel the parents/care givers during different stages of implantation.

Course Outcome – Cos		Cognitive Skill
CO-01	To understand the basics of implantable hearing devices	R, U, A
CO-02	To understand about bone anchored hearing devices and middle ear implants	R, U, A
CO-03	To understand the preoperative and operative concepts of cochlear implantation and brainstem implantation	R, U, A
CO-04	To understand the post operative concepts in cochlear implantation and brainstem implantation	R, U, A
CO-05	To understand the concepts of counselling, troubleshooting and rehabilitation post aural implantation	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

CO-05	S	L	L	S	S	M	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: IMPLANTABLE HEARING DEVICES- BASIC

12

- Need for implantable hearing devices
- History of implantable hearing devices (bone anchored hearing devices, middle ear implants, cochlear implants, auditory brainstem implants and midbrain implants)
- Candidacy for implantable hearing devices
- Team involved in implantable hearing devices
- Pre-implant counseling, Informed consent

UNIT II: BONE ANCHORED HEARING DEVICES AND MIDDLE EAR IMPLANTS

12

- Types, components
- Surgical approaches, risks, complications
- Audiological evaluations for candidacy
- Contraindications
- Assessment of benefits

UNIT III: COCHLEAR IMPLANT AND BRAIN STEM IMPLANTS – BASICS

12

- Terminology, types, components and features
- Bilateral, bimodal and hybrid cochlear implants
- Factors related to selection of the device, funding sources

- Surgical approaches, risks and complications
- Audiological and non-audiological candidacy criteria, and contraindications

UNIT IV: COCHLEAR IMPLANTS AND BRAINSTEM IMPLANTS

12

- Signal coding strategies, classification and types
- Intraoperative monitoring by audiologists
- Objective measures: ESRT, ECAP, prom stim, EABR, aided cortical potentials
- Post implant Mapping: schedule, pre-requisites, switch-on, mapping parameters, impedance, compliance, role of objective and subjective measures in mapping
- Post mapping audiological evaluation
- Assessment of benefits Optimization of hearing aid on contralateral ear

UNIT V: IMPLANTABLE HEARING DEVICES: COUNSELLING, TROUBLESHOOTING AND REHABILITATION

12

- Post implant Counselling on care and maintenance and troubleshooting of the device
- Overview of post implant rehabilitation including AVT
- Factors affecting outcome of implantable devices in adults and children

Practicals:

- Watch videos of BAHA, middle ear implant, cochlear implant
- Create hypothetical cases (at least 5 different cases) who are candidates for cochlear implantation.
- Make protocol for recording an EABR
- List down the technological differences across different models of cochlear implants from different companies, their cost
- Observation of mapping
- Watching of videos on AVT
- Watch video on cochlear implant surgery

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3675	CLINICALS IN SPEECH LANGUAGE PATHOLOGY III	0	1	2	3

Objectives:

After completing this course, the student will be able to understand

- The speech and language stimulation techniques
- Analysis of voice
- The assessment of speech and language disorders using formal and informal method
- Application of AAC in speech and language disorders
- Assessment of swallowing

Course Outcome – COs		Cognitive Skill
CO-01	Understand and apply speech and language stimulation techniques in different disorders	R, U, A
CO-02	Understand and apply the perceptual, acoustic and aerodynamic evaluation of voice	R, U, A
CO-03	Understand and apply the assessment of speech and language disorders using formal and informal method	R, U, A
CO-04	Understand the importance of AAC in different speech and language disorders	R, U, A
CO-05	Understand the assessment swallowing	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

S- Strong, M- Medium, L-Low, N- Not Relevant

General considerations

- Exposure is primarily aimed to be linked to the theory courses covered in the semester. After completion of clinical postings in Speech –language diagnostics, the student will know (concepts), know how (ability to apply), show (demonstrate in a clinical diary/log book based on clinical reports/recordings, etc), and do (perform on patients/ client contacts) the following:

Know

- Speech & language stimulation techniques.
- Different samples /procedures required to analyse voice production mechanism. (acoustic/ aerodynamic methods / visual examination of larynx/ self evaluation)
- Different samples /procedures required to analyse speech production mechanism in children with motor speech disorders.

Know- How

- To administer at least two more (in addition to earlier semester) standard tests for childhood language disorders.
- To administer at least two more (in addition to earlier semester) standard tests of articulation/ speech sounds.
- To set goals for therapy (including AAC) based on assessment/test results for children with language and speech sound disorders.

- To record a voice sample for acoustic and perceptual analysis.
- To assess parameters of voice and breathing for speech.
- Assessment protocol for children with motor speech disorders including reflex profile and swallow skills.
- Counselling for children with speech-language disorders.

Show:

- Acoustic analysis of voice – minimum of 2 individuals with voice disorders.
- Simple aerodynamic analysis - minimum of 2 individuals with voice disorders.
- Self evaluation of voice – minimum of 2 individuals with voice disorders.
- Informal assessment of swallowing – minimum of 2 children.
- Assessment of reflexes and pre linguistic skills - minimum of 2 children.
- Pre –therapy assessment and lesson plan for children with language and speech sound disorders - minimum of 2 children each

Do

- Case history - minimum of 2 individuals with voice disorders.
- Case history - minimum of 2 children with motor speech disorders Oral peripheral examination- minimum of 5 children
- Apply speech language stimulation/therapy techniques on 5 children with language disorders (with hearing impairment, specific language impairment & mixed receptive language disorder)/speech sound disorders
- minimum of 5 sessions of therapy for each child.
- Exit interview and counselling - minimum of 2 individuals with speech language disorders.

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3676	CLINICALS IN AUDIOLOGY III	0	1	2	3

Objectives:

After completing this course, the student will be able to

- Understand the assessment of listening needs
- Understand the national and international standards regarding electroacoustic characteristics of hearing aids
- Administer special tests for adaptation, recruitment and functional hearing loss
- Counsel hearing aid users regarding care, maintenance and trouble shooting
- Select and administer appropriate test battery approach for central auditory processing disorders
- Perform hearing trial, fitting and earmold preparation

Course Outcome – COs		Cognitive Skill
CO-01	To understand standards of EAC and perform EAM	R, U, A
CO-02	To administer special tests for adaptation, recruitment and functional hearing loss	R, U, A
CO-03	To select and administer appropriate test battery approach for central auditory processing disorders	R, U, A
CO-04	To understand hearing aid selection based on listening needs and to perform hearing aid counselling, fitment and verification measures	R, U, A
CO-05	To understand about different types of earmolds and its preparation	R, U, A

R- Remember, U-Understand, A-Apply, An- Analyze, E-Evaluate, S- Synthesis

General considerations

- Exposure is primarily aimed to be linked to the theory courses covered in the semester, however, not just limited to these areas. After completion of clinical postings in auditory diagnostics and auditory rehabilitation, the student will Know (concept), know how (ability to apply), show (demonstrate in a clinical diary/log book), and do (perform on patients/ client contacts) the following:

KNOW

- Indications to administer special tests Procedures to assess the listening needs
- National and international standards regarding electroacoustic characteristics of hearing aids

KNOW-HOW

- To administer at least 1 test for adaptation, recruitment, and functional hearing loss.
- Counsel hearing aid user regarding the use and maintenance hearing aids
- To troubleshoot common problems with the hearing aids
- To select test battery for detection of central auditory processing disorders.
- Select different types of ear moulds depending on type of hearing aid, client, degree, type and configuration of hearing loss

SHOW

- Electroacoustic measurement as per BIS standard on at least 2 hearing aids
- How to process 2 hard and 2 soft moulds
- How to preselect hearing aid depending on listening needs and audiological findings on at least 5 clinical situations (case files)
- How select test battery depending on case history and basic audiological information- 3 situations

DO

- Tone decay test – 2 individuals with sensori-neural hearing loss
- Strenger test – 2 individuals with unilateral/asymmetrical hearing loss
- Dichotic CV/digit, Gap detection test – 2 individuals with learning difficulty or problem in hearing in noise
- Hearing aid fitment for at least 5 individuals with mild to moderate and 3 individuals with mod-severe to profound
- Hearing aid selection with real ear measurement system on 3 individuals with hearing impairment.

SEMESTER V

SL. No	Course Code	Course Title	L	T	P	C
THEORY						
1	SA3620	Structural Anomalies & Speech Disorders	2	1	1	4
2	SA3621	Fluency and its Disorders	2	1	1	4
3	SA3622	Pediatric Audiology	2	1	1	4
4	SA3623	Aural Rehabilitation in Children	2	1	1	4
PRACTICAL						
5	SA3677	Clinical in Speech-Language Pathology IV	0	1	2	3
6	SA3678	Clinical in Audiology IV	0	1	2	3

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3620	STRUCTURAL ANOMALIES AND SPEECH DISORDERS	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Understand the characteristics of disorders with structural anomalies including speech
- Evaluate and diagnose the speech characteristics seen in these disorder
- Learn about the techniques for the management of speech disorders in these conditions

Course Outcome – COs		Cognitive Skill
CO-01	To understand the Speech characteristics of persons with cleft lip and palate	R, U, A
CO-02	To understand the assessment and management of cleft lip and palate speech	R, U, A
CO-03	To understand the structural anomalies of tongue and mandible	R, U, A
CO-04	To understand laryngectomy its characteristics & assessment	R, U, A
CO-05	To understand the management of laryngectomy	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-05	S	L	M	S	M	M	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: SPEECH CHARACTERISTICS OF PERSONS WITH CLEFT LIP AND PALATE 12

- Types, characteristics and classification of cleft lip and palate
- Causes of cleft lip and palate: genetic, syndrome and others
- Velopharyngeal inadequacy: types, causes and classification
- Associated problems in persons with cleft lip and palate: speech, language, feeding, dental and occlusion, hearing, psychological

UNIT II: ASSESSMENT AND MANAGEMENT OF CLEFT LIP AND PALATE SPEECH 12

- Team of professionals in the management of persons with cleft lip and palate: their roles in diagnosis and management.
- Assessment of persons with cleft lip and palate for speech language functions
- Subjective assessment of speech characteristics and speech intelligibility: proforma, tests, scales and others.
- Objective assessment of phonatory, resonatory and articulatory features
- Diagnosis and differential diagnosis of speech related functions
- Subjective assessment of language and communication functions
- Reporting test results using Universal Parameters
- Management of persons with cleft lip and palate

- Surgical and prosthetic management
- Techniques and strategies to correct speech sound disorders
- Techniques and strategies to improve feeding
- Counselling and guidance

UNIT III: STRUCTURAL ANOMALIES OF TONGUE AND MANDIBLE - CHARACTERISTICS, ASSESSMENT AND MANAGEMENT 12

- Types, classification and characteristics of structural anomalies of tongue and mandible
- Causes for structural anomalies of tongue and mandible
- Team of professionals in the management of persons with structural anomalies of tongue and mandible and their roles.
- Associated problems in persons with structural anomalies of tongue and mandible: Speech, Feeding, Dental and occlusion, Psychological and others
- Management of persons with structural anomalies of tongue and mandible
 - Surgical and prosthetic management
 - Techniques and strategies to improve speech intelligibility
 - Techniques and strategies to improve feeding
 - Counselling and guidance for persons with glossectomy and mandibulectomy

UNIT IV: CHARACTERISTICS & ASSESSMENT OF LARYNGECTOMY 12

- Causes, symptoms and classifications of laryngeal cancers
- Team of professionals in the management of persons with laryngeal cancer
- Surgery for laryngeal cancers: types and outcome
- Associated problems in laryngectomy individuals
- Assessment of speech and communication skills of laryngectomy individuals
- Pre and post-operative considerations

UNIT V: MANAGEMENT OF SPEECH AND COMMUNICATION IN LARYNGECTOMEES 12

- Esophageal speech: candidacy, types of air intake procedures, speech characteristics and its modification through techniques and strategies, complications and contraindications.

- Tracheo-esophageal speech: candidacy, types of TEP, fitting of prosthesis, speech characteristics and its modification through techniques and strategies, complications and contraindications.
- Artificial larynx: types, factors for selection, output characteristics, techniques for efficient use of artificial larynx, complications and contraindications.
- Other remedial procedures: Pharyngeal speech, buccal speech, ASAI speech, gastric speech.

Practicals

- Identify the different types of cleft lip and palate by looking at illustrations and images
- Listen to 10 speech samples of children with cleft lip and palate and rate their nasality/ speech (articulation and cleft type errors) based on universal reporting parameters.
- Identify the type of closure of velopharyngeal port for 5 normal individuals and 5 individuals with cleft lip and palate using videos of nasoendoscopy/ videofluoroscopy.
- Perform oral peripheral mechanism examination on 10 individuals and document the structure and functions of the articulators.
- Analyse the different types of occlusions in 10 individuals.
- Identify the type of glossectomy by looking at pictures/illustrations.
- Identify the different types of prosthesis in the management of head and neck cancer.
- Analyse the speech profile of 5 individuals with laryngectomy.
- Identify parts of an artificial larynx and explore its use.
- Prepare a checklist / pamphlet illustrating care of the stoma and T- tubes in vernacular.

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3621	FLUENCY AND ITS DISORDERS	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Understand the characteristics of fluency and its disorders
- Evaluate and diagnose fluency disorders
- Learn about the techniques for the management of fluency disorders

Course Outcome – COs		Cognitive Skill
CO-01	To understand fluency, parameters of fluency and its development	R, U, A
CO-02	To understand the disorders of fluency	R, U, A
CO-03	To understand the assessment and differential diagnosis of fluency disorders	R, U, A
CO-04	To understand the management of stuttering	R, U, A
CO-05	To understand the management of other fluency disorders	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

PO CO	PO-A	PO-B	PO-C	PO-D	PO-E	PO-F	PO-G	PO-H
CO-01	S	M	S	S	M	M	L	L
CO-02	S	S	S	S	M	M	L	L
CO-03	S	M	S	S	M	M	L	L
CO-04	S	M	M	S	L	M	L	L
CO-05	S	M	M	S	L	M	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: FLUENCY

12

- Scope and definition of fluency
- Factors influencing fluency
- Definition and characteristics of features of suprasegmentals in speech: rate of speech, intonation, rhythm, stress and pause
- Suprasegmental features in typical speech
- Suprasegmental features in the speech of persons with fluency disorders
- Developmental aspects of suprasegmentals of speech
- Normal non-fluency

UNIT II: STUTTERING AND OTHER FLUENCY DISORDERS

12

- Stuttering: Definition and causes for stuttering
- Characteristics of stuttering: core and peripheral characteristics, primary and secondary stuttering, effect of adaptation and situation
- Development of stuttering
- Normal non fluency: characteristics and differential diagnosis
- Theories of stuttering: organic, functional, neurogenic, diagnosogenic and learning
- Cluttering: Definition, causes and characteristics
- Neurogenic stuttering: Definition, causes and characteristics

UNIT III: ASSESSMENT AND DIFFERENTIAL DIAGNOSIS **12**

- Assessment of fluency disorders: stuttering, cluttering, neurogenic stuttering and normal non fluency
- Subjective methods: protocols and tests
- Objective methods
- Qualitative and quantitative assessment
- Differential diagnosis of fluency disorders

UNIT IV: MANAGEMENT OF STUTTERING **12**

- Approaches to management
- Changing scenario in management of stuttering
- Different techniques and strategies used in management with their rationale
- Relapse and recovery from stuttering
- Issues of speech naturalness in stuttering

UNIT V: MANAGEMENT OF FLUENCY-RELATED ENTITIES **12**

- Management of cluttering: rationale, techniques and strategies
- Management of neurogenic stuttering: rationale, techniques and strategies
- Management of normal non-fluency: rationale, techniques and strategies
- Relapse and recovery in cluttering and neurogenic stuttering.
- Changes in normal non-fluency
- Prevention and early identification of stuttering, and cluttering

Practicals:

- Assess the rate of speech in 5 normal adults.
- Record and analyze the supra segmental features in typically developing children between 2 and 5 years.
- Record audio visual sample of 5 typically developing children and 5 adults for fluency analysis.
- Listen/see samples of normal non fluency and stuttering in children and document the differences.
- Identify the types of dysfluencies in the recorded samples of adults with stuttering.

- Instruct and demonstrate the following techniques: Airflow, prolongation, easy onset shadowing techniques.
- Record 5 speech samples with various delays in auditory feedback and analyse the differences.
- Administer SPI on 5 typically developing children.
- Administer SSI on 5 adults with normal fluency.
- Administer self-rating scale on 10 adults with normal fluency.

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3622	PEDIATRIC AUDIOLOGY	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Describe auditory development
- List etiologies and relate them to different types of auditory disorders that may arise
- Explain different hearing screening/identification procedures and their application
- Elaborate on different aspects of paediatric behavioural and physiological / electrophysiological evaluation

Course Outcome – Cos		Cognitive Skill
CO-01	To understand the embryological and systematic development of the auditory system	R, U, A
CO-02	To understand about different auditory disorders and their impacts	R, U, A
CO-03	To understand early identification of hearing loss	R, U, A
CO-04	To understand about pediatric behavioural assessment for different age groups	R, U, A
CO-05	To understand pediatric electrophysiological assessments and test battery approach for differential diagnosis	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

CO-05	S	M	M	M	M	M	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: AUDITORY DEVELOPMENT

12

- Review of Embryology of the ear
- Development of auditory system from periphery to cortex
- Neuroplasticity
- Prenatal hearing
- Normal auditory development from 0-2 years
- Infant speech perception
- Incidence and prevalence of auditory disorders in children

UNIT II: AUDITORY DISORDERS

12

- Congenital and acquired hearing loss in children
- Permanent minimal and mild bilateral hearing loss
- Impact on auditory skills, speech-language, educational and socio-emotional abilities
- Moderate to profound sensorineural hearing loss
- Unilateral hearing loss
- Auditory Neuropathy Spectrum Disorders
- Central auditory processing disorders
- Pseudohypacusis
- Auditory disorders in special population and multiple handicap

UNIT III: EARLY IDENTIFICATION OF HEARING LOSS

12

- Principles of early hearing detection and intervention programs
- Principles and history of hearing screening
- Joint Committee on Infant Hearing position statement (2000, 2007, 2013, 2019)
- High risk register/ checklists for screening
- Sensitivity and specificity of screening tests
- Hearing screening in infants and toddlers: Indian and Global context
- Hearing screening in preschool children: Indian and Global context
- Hearing screening in school children (including CAPD): Indian and Global context

UNIT IV: PAEDIATRIC ASSESSMENT I

12

- Behavioral observation audiometry
- Conditioned orientation reflex audiometry
- Visual reinforcement audiometry
- TROCA
- Play audiometry
- Pure tone audiometry in children: Test stimuli, response requirement and reinforcement
- Speech audiometry (SRT, SDT): Speech recognition and speech perception tests developed in India)
- Bone conduction speech audiometry
- Immittance evaluation in paediatric population
- Central auditory processing disorders assessment

UNIT V: PAEDIATRIC ASSESSMENT II

12

- Recording and interpretation of OAE in paediatric population
- Factors affecting OAE in paediatric population
- Recording and interpretation of click evoked and tone burst evoked ABR in paediatric population
- Factors affecting ABR in paediatric population
- Recording ASSR in paediatric population
- Recording AMLR and ALLR in paediatric population
- Assessment of hearing loss in special population
- Diagnostic test battery for different age groups
- Diagnosis and differential diagnosis

Practicals:

- Observe a child with normal hearing (0-2 years) in natural settings. Write a report on his/her responses to sound.
- Observe a child with hearing impairment (0-2 years) in natural settings. Write a report on his/her responses to sound with and without his amplification device
- Administer HRR on at least 3 newborns and interpret responses Based on the case history, reflect on the possible etiology, type and degree of hearing loss the child may have.
- Compare ABR wave forms in children of varying ages from birth to 24 months.
- Observe live or video of BOA/VRA of a child with normal hearing and hearing loss and write a report on the instrumentation, instructions, stimuli used, procedure and interpretation.
- Observe OAE in a child with normal hearing and a child with hearing loss. Write a report on the instrumentation, protocol used and interpretation
- Observe ABR in a child with normal hearing and a child with hearing loss. Write down a report on the instrumentation, protocol used and interpretation
- Observe immittance evaluation in a child with normal hearing and a child with hearing loss. Write a report on the instrumentation, protocol used and interpretation
- Using role play demonstrate how the results of audiological assessment are explained to caregiver in children with the following conditions
 - Child referred in screening and has high risk factors in his history
 - Child with chronic middle ear disease
 - Child with CAPD
 - Child with severe bilateral hearing impairment

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3623	AURAL REHABILITATION IN CHILDREN	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Describe the different communication options available for young children with hearing impairment
- Explain the impact of hearing impairment on auditory development and spoken language communication
- Describe factors that effect of acoustic accessibility and strategies to manage them at home and in classroom
- Design activities for auditory learning at different levels
- Enumerate how the needs of individuals with hearing impairment using sign language and spoken language as form of communication in India are being met

Course Outcome – Cos		Cognitive Skill
CO-01	To understand auditory development, spoken communication and acoustic accessibility	R, U, A
CO-02	To understand communication options available for children with hearing loss	R, U, A
CO-03	To understand optimal listening and learning environments in infancy and early childhood	R, U, A
CO-04	To understand auditory training, speech reading training and speech language training for children with hearing loss	R, U, A
CO-05	To understand Indian perspectives of hearing loss in children	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-04	S	L	L	S	M	L	M	L
CO-05	S	L	L	S	M	M	S	M

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: AUDITORY DEVELOPMENT, SPOKEN COMMUNICATION AND ACOUSTIC ACCESSIBILITY

12

- Sensitivity period for auditory development
- Impact of hearing impairment on auditory development, spoken language acquisition, parent child communication
- Factors affecting auditory development
- Hearing loss implications for speech perception: acoustics of speech
- Optimizing hearing potential through hearing aids
- Optimizing hearing potential through cochlear implants
- Barriers to acoustic accessibility: distance, signal to noise ratio and reverberation
- Managing the listening environment for infants and toddlers' schools
- Signal to noise ratio enhancing technologies such as personal FM, loop systems, desktop group systems and blue tooth connectivity

UNIT II: COMMUNICATION OPTIONS

12

- Detecting and confirming hearing loss
- Parent support counselling and individual family service plan
- Choosing communication options
- Auditory oral approach
- Auditory verbal therapy
- Manual/sign language: Indian and Global context

- Cued speech and total communication
- Listening devices: hearing aid/cochlear implant
- Early intervention programs

UNIT III: OPTIMAL LISTENING AND LEARNING ENVIRONMENTS: INFANCY AND EARLY CHILDHOOD **12**

- Involvement of family
- Factors impacting family involvement, supporting families through information and education
- Creating optimum listening and learning environment
- Intervention: Assessment, auditory learning, listening and language facilitation techniques in infancy and early childhood
- Issues in children with mild hearing loss and unilateral hearing loss
- Children with ANSD or APD are intervened late
- Children with hearing loss and other special needs
- Listening and spoken language in school age: benefits of inclusion
- Intervention at school age: Functional hearing assessment, communication assessment and intervention to integrate with academic targets

UNIT IV: AUDITORY - SPEECH READING TRAINING AND LITERACY **12**

- Candidacy for auditory training and speech reading
- Auditory training/learning four design principles skill, stimuli, activity, and difficulty level
- Early training Objectives
- Analytic and Synthetic training Objectives
- Formal and informal training
- Auditory training for infants and very young children
- Outcomes of training
- Speech and language and literacy characteristics
- Speech language and literacy evaluation assessment
- Speech language therapy

- Prevalence of hearing impairment in children
- Education of the deaf in India historical perspectives
- Available resources for education of the hearing impaired
- Early intervention programs and centers
- Schools for the hearing impaired; day schools, residential schools
- Beyond school: college and vocational training
- Training manpower resources for service delivery
- Indian sign language
- Training sign language interpreters
- Cued speech in India
- Assessment and therapy tools developed for individuals with hearing impairment in India.

Practicals:

- Watch documentaries such as “Sound and Fury” (2001). Write a reflection of why parents made communication choices for their children
- Follow on links to the above film that shows the status of the children with hearing impairment after a few years.
- Learn at least 50 signs across different categories of Indian sign language. Make a video of you signing 10 sentences. Have a class mate interpret them.
- Interview a parent of a child with hearing impairment on how they adapted their child to wear the hearing aids and /or implant. What were the first responses to sound they observed and how language and speech develop?
- Complete a functional auditory evaluation on one child with hearing loss. Do a speech and language evaluation and also write a report on the child strengths and weakness.
- Design and demonstrate auditory learning activities at the four levels awareness, discrimination, identification and comprehension. Ensure that the activities encompass different skill level and difficulty levels.
- Develop a short audio/film/pamphlet for parents in your local language on one of the following: teaching parent to trouble shooting the hearing aid/cochlear implant, establishing consistent use of listening device, activities to facilitate language across different age groups

- Visit a school for the deaf. Document your observation about the acoustic environment in the class, strategies used by the teacher to promote listening and spoken language

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3677	CLINICALS IN SPEECH LANGUAGE PATHOLOGY IV	0	1	2	3

Objectives:

After completing this course, the student will be able to

- Understand and perform the analysis of speech skills such as voice, fluency and articulation using subjective and objective methods and make appropriate diagnosis
- Understand and perform the assessment, differential diagnosis, management, and counselling clients with motor speech disorders, structural anomalies and laryngectomy
- Understand and perform the assessment and management of children with language disorders

Course Outcome – COs		Cognitive Skill
CO-01	To understand and perform the assessment of speech skills such as voice, fluency, and articulation	R, U, A
CO-02	To understand and perform the assessment, management, counselling of children with motor speech disorders	R, U, A
CO-03	To understand and perform the assessment, management, counselling of individuals with structural anomalies	R, U, A
CO-04	Understand and perform the assessment and management of individuals with laryngectomy	R, U, A
CO-05	Understand and perform the assessment and management of children with language disorders	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

S- Strong, M- Medium, L-Low, N- Not Relevant

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester.
- After completion of clinical postings in Speech –language diagnostics, the student will know (concepts), know how (ability to apply), show (demonstrate in a clinical diary/log book based on clinical reports/recordings, etc.), and do (perform on patients/ client contacts) the following:

Know:

- Procedures to assess speech fluency and its parameters using standardized tests for children and adults.
- Differential diagnosis of motor speech disorders in children.
- Procedures to assess individuals with cleft lip and palate, and other oro-facial structural abnormalities.
- Procedures to assess laryngectomy and provide management options.

Know-how:

- To administer at least two more (in addition to earlier semesters) standard tests for childhood language disorders.
- To record a speech sample for analysis of fluency skills (including blocks & its frequency, rate of speech, prosody, etc.).
- To assess posture and breathing for speech in children with motor speech disorders.
- To consult with inter-disciplinary medical/rehabilitation team and counsel the

individual/family regarding management options and prognosis.

Show:

- Rating of cleft, speech intelligibility and nasality – minimum of 2 individuals with cleft lip and palate.
- Language assessment - minimum of 2 individuals with cleft lip and palate.
- Transcription of speech sample and assessment of percentage dis/dysfluency– minimum of 2 individuals with stuttering.
- Assessment of rate of speech on various speech tasks – at least on 2 children & adults.

Do:

- Voice assessment report - minimum of 2 individuals with voice disorders.
- Fluency assessment report - minimum of 2 individuals with fluency disorders.
- Oral peripheral examination on minimum of 2 individuals with cleft lip and palate.
- Apply speech language stimulation/therapy techniques on 5 children with language disorders/ speech sound disorders/ motor speech disorders – minimum 5 sessions of therapy for each child.

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

Total: 45 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3678	CLINICALS IN AUDIOLOGY IV	0	1	2	3

Objectives:

After completing this course, the student will be able to

- Understand different protocols in tympanometry, reflexometry, auditory brainstem responses, otoacoustic emission, and vestibular assessment
- Understand the indicators for selecting implantable hearing devices
- To understand and perform various speech stimulation and auditory training techniques.
- To understand and perform BOS, VRA, and conditioned play audiometry

Course Outcome – Cos		Cognitive Skill
CO-01	To understand and perform immittance audiometry	R, U, A
CO-02	To understand and perform ABR and OAE	R, U, A
CO-03	To understand and perform vestibular assessment	R, U, A
CO-04	To understand and perform various speech stimulation and auditory training techniques	R, U, A
CO-05	To understand and perform BOS, VRA, and conditioned play audiometry	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

S- Strong, M- Medium, L-Low, N- Not Relevant

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester, however, not just limited to these areas.
- After completion of clinical postings in auditory diagnostics and auditory rehabilitation, the student will Know (concept), know how (ability to apply), show (demonstrate in a clinical diary/log book), and do (perform on patients/ client contacts) the following:

Know:

- Different protocols in tympanometry and reflexometry.
- Different protocols used in auditory brainstem responses
- Protocols for screening and diagnostic otoacoustic emissions
- Tests to assess vestibular system
- Different indications for selecting implantable hearing devices
- Various speech stimulation and auditory training techniques

Know-how:

- To administer auditory brainstem responses for the purpose of threshold estimation and site of lesion testing
- To administer high frequency tympanometry and calculate resonance frequency
- To administer high risk register
- To modify the given environment to suit the needs of hearing impairment

Show:

- Analysis of ABR waveforms – threshold estimation 5 and site of lesion 5
- Analysis of immittance audiometry and relating to other tests – 5 individuals with conductive and 5 individuals with sensori-neural hearing loss
- How to formulate select appropriate auditory training technique based on audiological evaluation

Do:

- Threshold estimation on 5 infants (< 2 years)
- TEOAE and DPOAE on 5 infants (<2 years)
- BOA on 5 infants (<2 years)
- VRA on 2 infants (6 month – 3 year)
- Conditioned play audiometry – 3 children (3-6 years)
- Hearing aid fitment on 1 infant (< 3 years) 2 children (3-6 years)
- Listening age of 3 children with hearing impairment
- Appropriate auditory training on 5 children with hearing loss

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

Total: 45 Hours

SEMESTER VI

Sl.No	Course Code	Course Title	L	T	P	C
THEORY						
1	SA3624	Motor Speech Disorders in Adults	2	1	1	4
2	SA3625	Language Disorders in Adults	2	1	1	4
3	SA3626	Aural Rehabilitation in Adults	2	1	1	4
4	SA3627	Audiology in Practice	2	1	1	4

5	SA3679	Clinical in Speech-Language Pathology	0	1	2	3
6	SA3680	Clinical in Audiology	0	1	2	3

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3624	MOTOR SPEECH DISORDERS IN ADULT	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Understand the characteristics of acquired motor speech disorders in adults
- Evaluate and diagnose speech characteristics in acquired motor speech disorders
- Learn about the techniques for the management of speech and related error in acquired motor speech disorders

Course Outcome – Cos		Cognitive Skill
CO-01	To understand the different causes and characteristics of dysarthria	R, U, A
CO-02	To understand the assessment and diagnosis of dysarthria	R, U, A
CO-03	To understand the management of dysarthria	R, U, A
CO-04	To understand the assessment and management of apraxia in adults	R, U, A
CO-05	To understand the management related issues in motor speech disorders	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: CAUSES & CHARACTERISTICS OF DYSARTHRIA

12

- Definition, etiology and classification of acquired dysarthria
- General, speech and feeding related characteristics of acquired dysarthria with and without genetic underpinnings:
- Vascular lesions: dysarthria following stroke/CVA, cranial and peripheral nerve palsies
- Infectious condition of the nervous system: dysarthria following meningitis, encephalitis, polyneuritis, poliomyelitis, neurosyphilis.
- Traumatic lesions: Dysarthria following TBI.
- Toxic conditions of the nervous system: Dysarthria following exogenic and endogenic toxic conditions of the nervous system.
- Anoxia of the nervous system: Dysarthria following anoxic conditions
- Metabolic disorders affecting nervous system: Dysarthria following metabolic conditions that affect the nervous system, Wilson's disease etc.
- Idiopathic causes: Dysarthria following idiopathic causes
- Neoplastic lesions of nervous system: Dysarthria following neoplastic lesions in the nervous system
- Demyelinating and degenerative conditions: Huntington's Chorea, Parkinson's, Multiple Sclerosis, Motor Neuron Diseases

UNIT II: ASSESSMENT AND DIAGNOSIS OF DYSARTHRIA

12

- Subjective assessment of dysarthria:
- Assessment of respiratory, phonatory, resonatory, articulatory errors
- Assessment of prosodic features Assessment of speech intelligibility Scales, protocols and tests used for subjective assessment of dysarthria
- Instrumental analysis of speech in dysarthria: Acoustic, kinematic and physiological
- Advantages and disadvantages of subjective and instrumental procedures in the assessment of dysarthria in adults
- Differential diagnosis of acquired motor speech disorders in adults:
 - Dysarthria and verbal apraxia
 - Dysarthria and functional articulation disorders
 - Dysarthria and aphasia
 - Apraxia of speech and aphasia
 - Dysarthria from other allied disorders such as agnosia, alexia, agraphia etc.
 - Apraxia from other allied disorders such as agnosia, alexia, agraphia etc.
- Assessment of feeding, swallowing and related issues in persons with dysarthria

UNIT III: MANAGEMENT OF DYSARTHRIA

12

- Management of acquired dysarthria
- General principles in the management of dysarthria
- Influence of medical, prosthetic and surgical procedures on the speech in persons with acquired dysarthria.
- Facilitative approach: vegetative, sensorimotor and reflex based.
- Systems approach: correction of respiratory, phonatory, resonatory, articulatory and prosodic errors.
- Strategies to improve speech intelligibility and speech enhancement techniques
- Strategies to improve feeding, swallowing behavior in persons with acquired dysarthria

UNIT IV: ASSESSMENT AND MANAGEMENT OF APRAXIA IN ADULTS

12

- Definition, etiology and classification of acquired apraxia
- Characteristics of nonverbal apraxia's in adults
- Characteristics of verbal apraxia's in adults
- Subjective assessment strategies: standard tests and scales, protocols and behavioral profiles

- Instrumental analysis of the speech of apraxia in adults: Acoustic, Kinematic and Physiological
- Management Approaches for verbal & nonverbal apraxia: principles and strategies

UNIT V: MANAGEMENT RELATED ISSUES IN MOTOR SPEECH DISORDERS 12

- Team involved in the management of persons with acquired dysarthria and apraxia
- Issues related to maintenance and generalization of speech in dysarthria and apraxia
- Counselling and guidance for persons with acquired dysarthria and apraxia
- Augmentative and alternative strategies for persons with acquired dysarthria and apraxia

Practicals:

- Identify the cranial nerves and mention its origin and insertion from a picture/ model.
- Demonstrate methods to assess the cranial nerves.
- Assess the respiratory system using speech and non-speech tasks in 10 healthy adults.
- Assess the phonatory system using subjective and acoustic analysis in 10 healthy adults.
- Looking at a video identify the clinical signs and symptoms of different neurological conditions resulting in Dysarthria.
- Record the speech sample of 5 normal adults and compare with the audio sample of individuals with Dysarthria.
- Administer Duffy's intelligibility rating scale on 5 healthy adults.
- Administer Frenchay's Dysarthria Assessment on 5 healthy adults.
- Demonstrate activities to improve the functions of speech subsystem.
- Identify the signs of UMN and LMN based on a video.
- Prepare a low tech AAC for functional communication for an individual with apraxia.

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3625	LANGUAGE DISORDERS IN ADULTS	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Understand the characteristics of language disorders in adults
- Evaluate and diagnose speech characteristics in adults with language disorders
- Learn about the techniques for the management of speech and related errors in
- Language disorders seen in adults

Course Outcome – COs		Cognitive Skill
CO-01	To understand the neural bases of language	R, U, A
CO-02	To understand different language disorders in adults	R, U, A
CO-03	To understand the assessment and diagnosis of language disorders	R, U, A
CO-04	To understand management of language disorders	R, U, A
CO-05	To understand the rehabilitation issues relating to adult language disorders	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-04	S	M	M	S	M	M	N	N
CO-05	S	L	L	M	N	M	L	N

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: NEURAL BASES OF LANGUAGE

12

- Correlates of language functions:
 - Neuroanatomical
 - Neurophysiological
 - Neurobiological
 - Cognitive
- Neurolinguistic models of language processing
 - Connectionist models
 - Hierarchical models
 - Global models
 - Process models
 - Computational models
- Language process in bi/multilingualism
- Language processing in right hemisphere

UNIT II: LANGUAGE DISORDERS IN ADULTS

12

- Definition, causes and characteristics of speech, language and cognition in Aphasia: cortical and subcortical
 - Primary progressive aphasia
 - Traumatic brain injury
 - Right hemisphere damage
 - Schizophasia

➤ Dementia

- Differential diagnosis of various language disorders seen in adults

UNIT III: ASSESSMENT AND DIAGNOSIS OF LANGUAGE DISORDERS 12

- Assessment of the following in aphasia (primary progressive aphasia, traumatic brain injury, right hemisphere damage, schizophasia and dementia)
 - Linguistic behaviour including speech: scales, tests, protocols.
 - Assessment of cognitive, social, behavioural characteristics
- Medical Investigation: Neuroimaging

UNIT IV: MANAGEMENT OF LANGUAGE DISORDERS 12

- Medical, linguistic and programmed intervention for persons with Aphasia (cortical and subcortical)
 - Primary progressive aphasia
 - Traumatic brain injury
 - Right hemisphere damage
 - Schizophasia
 - Dementia

UNIT V: REHABILITATION ISSUES RELATING TO ADULT LANGUAGE DISORDERS 12

- Team involved in the rehabilitation of persons with adult language disorders
- Factors influencing the assessment and intervention for language in the context of bilingual and multilingual influences.
- Factors influencing the assessment and management of language in persons who are preliterate, illiterate and literate.
- Assessment of quality of life
- Recovery patterns and prognosis in adults with language disorders
- Age related influence in adults with language disorders
- Counselling and guidance for adults with language disorders
- Generalization and maintenance issues in adults with language disorders
- Augmentative and alternative strategies for adults with language disorders

Practicals:

- Identify different lobes of in the brain by looking at a model/ image and label the language areas.
- Administer a standardized test battery on 3 normal individuals to assess language and cognition.
- Administer bilingual aphasia test on 3 healthy normal adults.
- List the language characteristics in different types of aphasia from a video.
- Analyse the speech, linguistic and non-linguistic features seen in Right hemisphere damaged individual from a video.
- In a given brain model mark the subcortical structures involved in language processing/ production.
- Demonstrate various facilitatory and compensatory therapy techniques in the management of aphasia.
- Formulate activities to assess linguistic abilities in dementia and aphasia.
- Counsel by a role play for a given profile of an individual with adult language disorder.
- Prepare a counselling checklist /guideline that can be used with the family members of an individual with aphasia and traumatic brain injury.

Total:60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA3626	AURAL REHABILITATION IN ADULTS	2	1	1	4

Objectives:

After completing this course, the student will be able to

- Describe the impact on the quality of life of adults with hearing impairment
- Explain the principles benefits and limitations of auditory training and speech reading
- Recognize factors that impair communication and suggest facilitative and repair strategies
- Identify components of aural rehabilitation program for adults (planning to outcome assessment)
- Identify strategies used with the older adult to implement a successful aural rehabilitation program
- Administer different tools for assessment of hearing handicap, attitudes and beliefs that can impact aural rehabilitation

Course Outcome – COs		Cognitive Skill
CO-01	To understand basic concepts of aural rehabilitation	R, U, A
CO-02	To understand about listening training and speech reading for adults	R, U, A
CO-03	To understand about different communication strategies used in aural rehabilitation	R, U, A
CO-04	To understand about aural rehabilitation given for adults	R, U, A
CO-05	To understand about aural rehabilitation given for older adults	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-03	S	L	M	S	L	M	N	N
CO-04	S	L	L	M	M	M	N	N
CO-05	S	L	L	M	M	M	N	N

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: AURAL REHABILITATION

12

- Definition
- Scope of aural rehabilitation in adults
- Prevalence of hearing loss in children (global and Indian data)
- Prevalence of hearing loss in adults (global and Indian data)
- Relationship between audiometric data, hearing difficulties and amplification considerations
- Limitations of audiometric data
- Quality of life and impact on income, education, employment;
- Assessing communication handicap: interviews, questionnaires
- Vocational rehabilitation

UNIT II: LISTENING TRAINING AND SPEECH READING FOR ADULTS

12

- Listening to speech with a hearing loss
- Candidacy for auditory training
- Listening training to improve speech perception
- Listening training to improve music perception
- Benefits of auditory training
- Speech reading for communication
- Characteristics of good lip readers versus good speech readers

- Factors affecting speech reading
- Assessing vision only auditory only processing
- Traditional methods of speech reading training.

UNIT III: COMMUNICATION STRATEGIES

12

- Factors that influence the reception of spoken message
- Facilitative communication strategies
- Repair strategies
- Repairing a communication breakdown
- Conversational styles
- Communication strategies training formal instruction, guided learning, real world practice

UNIT IV: AURAL REHABILITATION FOR ADULTS

12

- Principles of aural rehabilitation in adults
- Psychological impact of hearing loss
- Support through counselling
- Orienting towards hearing aid use
- Needs assessment for non-hearing and assistive technology for adults
- Categories of assistive technology
- Aural rehabilitation programs: Individual vs group
- Components of aural rehabilitation program
- Process of aural rehabilitation
- Communication under adverse listening conditions

UNIT V: AURAL REHABILITATION FOR OLDER ADULTS

12

- Influence of aging on the older adults: quality of life and psychological perspectives
- Influence of aging on the older adults: quality of life and social perspectives
- Auditory barriers to communication
- Non auditory barriers to communication
- Barriers to aural rehabilitation
- Factors influencing hearing aid use by the older adult
- Aural rehabilitation for different populations of older adult: independent semi-independent and dependent older adult
- Aural rehabilitation in an old age home
- Hearing aid orientation

Practicals:

- All scales and tools available in Hull R. H; Introduction to aural rehabilitation
- Listen to the speech recorded using hearing loss simulators (available on internet) and experience the sounds as heard by persons with different degrees of hearing loss. Write your observations on the same
- Simulate hearing loss by plugging ears and administer sentence tests of word recognition. Write a report on the performance
- Administer any three self-report questionnaires to three adults who have hearing loss and write a report of the relationship of their hearing loss to performance on the scale
- Administer any three self-report questionnaires to three older adults who have hearing loss and write a report of the relationship of their hearing loss to performance on the scale
- Administer any three self-report questionnaires to three adults who wear hearing aids and write a report of the relationship of their hearing loss to performance on the scale
- Administer the hearing belief questionnaire (Saunders, 2013) on an adult. Identify the positive and negative attitude and behavior that may impact the success of aural rehabilitation
- Design a session of aural rehab program (Objectives, activities, outcomes assessment) for adults recently fitted with cochlear implant, group of 4 older adults.
- Design an individualised program for an executive using a hearing aid for the first time, and an adult moving from an analog to a digital hearing aid
- Develop a pamphlet in your local language that would address any topic in aural rehabilitation

Total: 60 Hours

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA3627	AUDIOLOGY IN PRACTICE	2	1	1	4

Objectives:

After completing this course, the student will be able to

- List and describe the highlights of legislations relating to hearing impairment and other disabilities
- Incorporate ethical practices in professional service delivery.
- Provide information on welfare measures, policies of government when needed
- Describe different strategies to create awareness of hearing impairment and programs to address them
- Explain the different clinical practice settings in audiology with reference to their requirement, protocols and role and responsibility of audiologist
- Describe methods to measure the impact of noise on humans and strategies to address excessive noise exposure in industries and the community.
- Describe terminology, technology and methods used in tele practice, and their application in audiological service delivery

Course Outcome – Cos		Cognitive Skill
CO-01	To understand the scope, legislation and ethics in audiology	R, U, A
CO-02	To understand about hearing health and strategies for prevention of hearing impairment	R, U, A
CO-03	To understand about audiological practice in different settings	R, U, A
CO-04	To understand about noise and hearing conservation in industry and community	R, U, A
CO-05	To understand about scope and practice in tele-audiology	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

CO-05	S	N	M	L	L	M	M	M

S- Strong, M- Medium, L-Low, N- Not Relevant

UNIT I: SCOPE, LEGISLATION AND ETHICS IN AUDIOLOGY

12

- Scope of practice in audiology (National – ISHA & International body - AAA)
- Professional ethics (ISHA)
- Legislations and conventions relating to disability: need and historical aspects
- Classification of hearing impairment and disability certification
- Rehabilitation Council of India Act (1992) and its amendments
- Person with Disability Act (1995)
- National Trust Act (1999)
- Right to Education (2012)
- Biwako Millennium framework (2003) and Salamanca Statement 1994
- UNCRPD
- Concept of barrier free access and universal design relating to individuals with hearing impairment

UNIT II: HEARING HEALTH AND STRATEGIES FOR PREVENTION OF HEARING IMPAIRMENT

12

- Epidemiology of hearing disorders
- ICD and ICF
- Levels of prevention: Primary, secondary and tertiary
- National programs and efforts national institutes

- Welfare measures by Government and Camps (planning, purpose, organizing and providing remedial measures)
- Public education and information (media, radio broadcasts, street plays)
- Hearing health and prevention programs (hearing help line, dangerous decibels, online hearing tests etc.)

UNIT III: AUDIOLOGICAL PRACTICE IN DIFFERENT SETTINGS

12

- Audiological Private practice
- ENT clinics
- Paediatric / neonatology clinic/departments
- Neurology departments
- Factories and Industry
- Hearing aid dispensing centre/hearing aid industry
- Rehabilitation centres such as DRC/CRCs
- Schools for the hearing impaired
- Cochlear implant clinics
- Multiple handicap habilitation centre and others

UNIT IV: NOISE AND HEARING CONSERVATION IN INDUSTRY AND COMMUNITY

12

- Introduction to noise and its types
- Sources of noise in the industry and community
- Effects of noise in the auditory system (outer, middle and inner ear)
- Temporary threshold shift, permanent threshold shift, factors increasing the risk of NIHL
- Non auditory effects of noise (physiological, psychological, stress, sleep, job productivity and accidents)
- Legislations related to noise: permissible noise exposure levels, workers compensation, OSHA standards
- Indian legislations related to noise
- Instrumentation, measurement and procedure for measuring noise in industry
- Instrumentation, measurement and procedure for measuring noise in community
- Hearing conservation program (HCP), steps, record keeping, Ear protective devices

- Introduction to tele-health: definition, history of tele-health
- Terminologies-tele-health, tele medicine, tele practice
- Connectivity: internet, satellite, mobile data
- Methods of tele-practice-store and forward and real time
- Ethics and Regulations for tele-audiology
- Requirements/Technology for tele- audiology: Web based platforms, Video conferencing, infrastructure
- Manpower at remote end and audiologist end, training assistants for tele-audiology
- Audiological screening using tele-technology: new born hearing screening, school screening, community screening, counselling
- Diagnostic audiological services using tele-technology: video otoscopy, pure tone audiometry, speech audiometry, oto-acoustic emission, tympanometry, auditory brainstem response
- Intervention / aural rehabilitation using tele-technology: hearing aid counselling and troubleshooting, tinnitus, counselling, aural rehabilitation services, AVT, and counselling

Practicals

- Undertake the activities such as ‘Dangerous decibel” program ([www. Dangerous decibels.org](http://www.Dangerousdecibels.org))
- Noise measurement and attenuation measurement of ear protection devices.
- Sound level meter measurement in different areas (generator room, audio rooms)
- Speech in noise assessment for 10 subjects
- Visit an audiologist in different practice settings and provide a report
- Administer ICF protocols for patients with different disorders
- Explore websites of national institutes, hearing aid companies, NGOs in disability field and describe the accessibility features and information provided
- Remote control a PC based audiology equipment connected to internet using any authorized desktop sharing software
- Develop one pamphlet/poster/ in local language that would address some aspect of audiology practice
- Perform Accessibility ability of your institute/center and prepare a report

Total: 60 Hours

21. Scope of practice by RCI
22. Swanepoel de W, Hall JW 3rd .A systematic review of tele health applications in audiology. Telemed J E Health. 2010 Mar;16(2):181-200. doi:10.1089/tmj.2009.0111. UNCRPD

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3679	CLINICALS IN SPEECH LANGUAGE PATHOLOGY V	0	1	2	3

Objectives:

After completing this course, the student will be able to understand

- The assessment of neurogenic communication disorders
- The assessment of dysphagia
- The management of neurogenic communication disorders including AAC
- Voice and fluency therapy
- Speech and language therapy for children with language disorders

Course Outcome – COs		Cognitive Skill
CO-01	To understand and perform the assessment of neurogenic communication disorders	R, U, A
CO-02	To understand and perform the assessment of dysphagia	R, U, A
CO-03	To understand and perform the management of neurogenic communication disorders	R, U, A
CO-04	To understand and perform voice and fluency therapy	R, U, A
CO-05	To understand and perform Speech and language therapy for children with language disorders	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

PO CO	PO-A	PO-B	PO-C	PO-D	PO-E	PO-F	PO-G	PO-H
CO-01	S	L	S	S	M	M	L	L
CO-02	S	L	S	S	M	M	L	L
CO-03	S	L	S	S	M	M	L	L
CO-04	S	L	M	S	M	M	L	L
CO-05	S	L	M	S	M	M	L	L

S- Strong, M- Medium, L-Low, N- Not Relevant

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester.
- After completion of clinical postings in Speech–language diagnostics, the student will know (concepts), know how (ability to apply), show (demonstrate in a clinical diary/log book based on clinical reports/recordings, etc.), and do (perform on patients/ client contacts) the following:

Know:

- Procedures to assess motor speech disorders in adults.
- Differential diagnosis of motor speech disorders in adults.
- Procedures to assess individuals with adult language disorders, and other related abnormalities.

Know-how:

- To administer at least two standard tests for adult language disorders.
- To administer at least two standard tests/protocols for motor speech disorders in adults.
- To record a sample for analysis of language and speech skills in adults with neurocommunication disorders.
- To assess posture, breathing, speech and swallowing in adults with MSD
- To consult with inter-disciplinary medical/rehabilitation team and counsel the individual/family regarding management options and prognosis.

Show:

- Language assessment - minimum of 2 individuals after stroke.
- Associated problems in individuals after stroke and its evaluation.
- Dysphagia assessment – minimum of 2 children & adults.
- Goals and activities for therapy (including AAC) based on assessment/test results for adults with neuro-communication disorders.

Do:

- Voice therapy - Minimum of 2 individuals with voice disorders.
- Fluency therapy - Minimum of 2 individuals with fluency disorders.
- Bed side evaluation of individuals with neuro-communication disorders – Minimum of 2 individuals.
- Apply speech language stimulation/therapy techniques on 5 children with language disorders/speech sound disorders/ motor speech disorders – minimum 5 sessions of therapy for each child.

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 3680	CLINICALS IN AUDIOLOGY V	0	1	2	3

Objectives:

After completing this course, the student will be able to

- Understand the national and international standards related to noise exposure and perform noise survey in industry and community
- Understand mapping of cochlear implant in infants and children using subjective and objective procedures
- Understand hearing conservation program
- Understand and perform AVT
- Understand and perform Hearing aid trial, fitting, fine tuning and auditory training

Course Outcome – COs		Cognitive Skill
CO-01	To understand and perform treatment options for cochlear implantees	R, U, A
CO-02	To understand standards related to noise exposure and to carry out noise survey	R, U, A
CO-03	To carry out mapping and trouble shooting of cochlear implant	R, U, A
CO-04	To perform subjective and objective measures of cochlear implant performance	R, U, A
CO-05	To perform comprehensive hearing conservation program	R, U, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-04	S	N	L	M	M	M	L	L
CO-05	S	N	L	L	S	M	S	M

S- Strong, M- Medium, L-Low, N- Not Relevant

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester, however, not just limited to these areas.
- After completion of clinical postings in auditory diagnostics and auditory rehabilitation, the student will Know (concept), know how (ability to apply), show (demonstrate in a clinical diary/log book), and do (perform on patients/ client contacts) the following:

Know:

- National and international standards related to noise exposure.
- Recommend appropriate treatment options such as speech reading, AVT, combined approaches etc.

Know-how:

- To carryout noise survey in Industry and community
- To carryout mapping of cochlear implant in infants and children using both objective and subjective procedures
- To trouble shoot cochlear implant

Show:

- Analysis of objective responses like compound action potential, stapedial reflexes on at least 3 samples
- Comprehensive hearing conservation program for at least 1 situation

Do:

- AVT on at least 1 child with hearing impairment
- Trouble shooting and fine tuning of hearing aids on at least 5 geriatric clients
- At least one activity for different stages involved in auditory training

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

SEMESTER VII & VIII

Sl.No	Course Code	Course Title	L	T	P	C
PRACTICAL (INTERNSHIP)						
1	SA36P1	Clinical in Speech-Language Pathology VI	0	2	9	11
2	SA36P2	Clinical in Audiology VI	0	2	9	11

SUBJECT CODE	SUBJECT TITLE	L	T	P	C
SA 36P1	CLINICALS IN SPEECH LANGUAGE PATHOLOGY VI	0	2	9	11

Objectives:

After completing this course, the student will be able to

- Understand the diagnosis of speech, language and swallowing disorders across lifespan
- Understand the management of speech, language and swallowing disorders across lifespan
- Maintain proper documentation in the clinics
- Engage in community based rehabilitation activities

Course Outcome – Cos		Cognitive Skill
CO-01	To Understand the diagnosis of speech, language and swallowing disorders across lifespan	U, R, A
CO-02	To understand the management of speech, language and swallowing disorders across lifespan	U, R, A
CO-03	To maintain proper documentation in the clinics	U, R, A
CO-04	To provide community based rehabilitation services	U, R, A
CO-05	To establish speech and hearing clinic in different set up	U, R, A

R- Remember, U-Understand, A-Apply, An-Analyze, E-Evaluate, S- Synthesis

MAPPING OF COURSE OUTCOME WITH PROGRAMME OUTCOME

CO-05	S	N	L	M	L	S	M	S

S- Strong, M- Medium, L-Low, N- Not Relevant

General Considerations:

Clinical internship aims to provide clinical exposure and experience in different set ups. The students would not only carry out greater quantum of work, but also work varied clinical populations and in different contexts. Internship will provide greater opportunity for the students to liaise with professionals from allied fields. The intern is expected to demonstrate competence and independence in carrying out the following, among others

- Diagnosis and management of speech, language, and swallowing disorders across life span.
- Report evaluation findings, counsel and make appropriate referrals.

- Plan and execute intervention and rehabilitation programs for persons with speech language, communication, and swallowing disorders
- Develop and maintain records related to persons with speech-language, communication, and swallowing disorders
- Engage in community related services such as camps, awareness programs specifically, and community based rehabilitation activities, in general.
- Make appropriate referrals and liaise with professionals from related fields.
- Gain experience in different set ups and be able to establish speech centres in different set-ups
- Demonstrate that the objectives of the B.ASLP program have been achieved.
- Advise on the welfare measures available for their clinical clientele and their families.
- Advise and fit appropriate aids and devices for their clinical population.
